Sanitas™ v.9.6.34 . UG
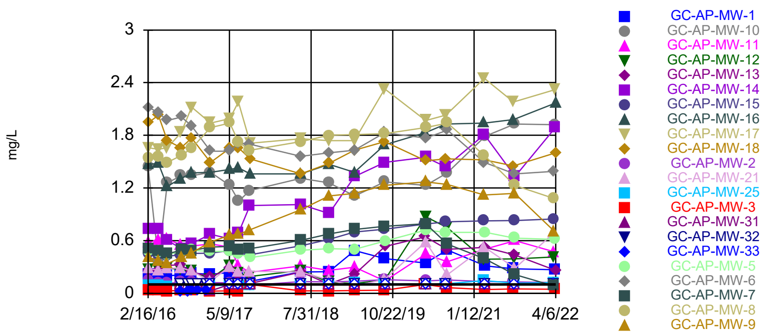
Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Limit = 0.1015

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 126 background values. 93.65% NDs. Annual per-constituent alpha = 0.005406. Individual comparison alpha = 0.0001232 (1 of 2). Comparing 22 points to limit.

Constituent: Boron Analysis Run 6/1/2022 1:03 PM View: AIII

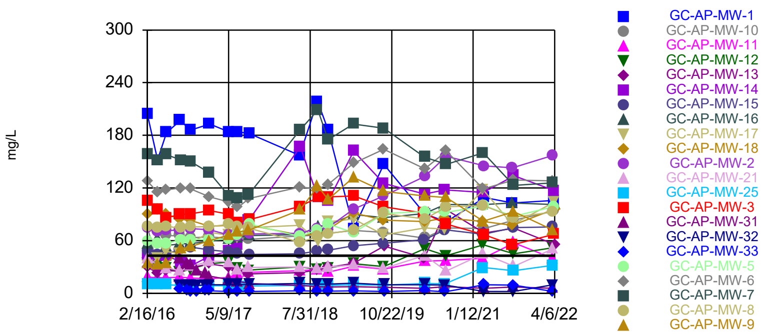
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16,..

Prediction Limit

Interwell Non-parametric



Limit = 42.8

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 133 background values. Annual per-constituent alpha = 0.004874. Individual comparison alpha = 0.000111 (1 of 2). Comparing 22 points to limit.

Constituent: Calcium Analysis Run 6/1/2022 1:03 PM View: AIII

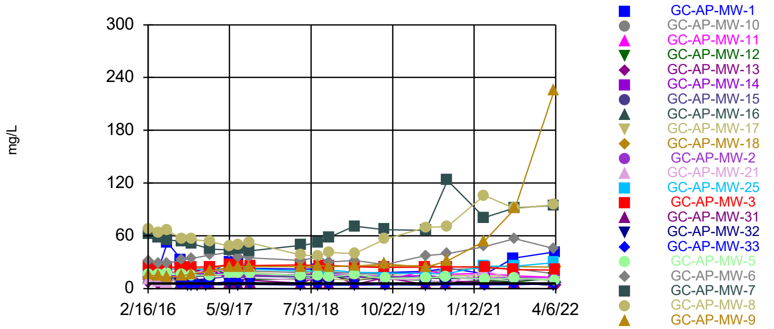
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16,..

Prediction Limit

Interwell Parametric



Limit = 5.842

Background Data Summary (based on natural log transformation): Mean=0.7552, Std. Dev.=0.4753, n=133, 3.759% NDs. Normality test: Chi Squared @alpha = 0.01, calculated = 11.44, critical = 14.07. Kappa = 2.125 (c=7, w=22, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.000342. Comparing 22 points to limit.

Constituent: Chloride Analysis Run 6/1/2022 1:03 PM View: AIII

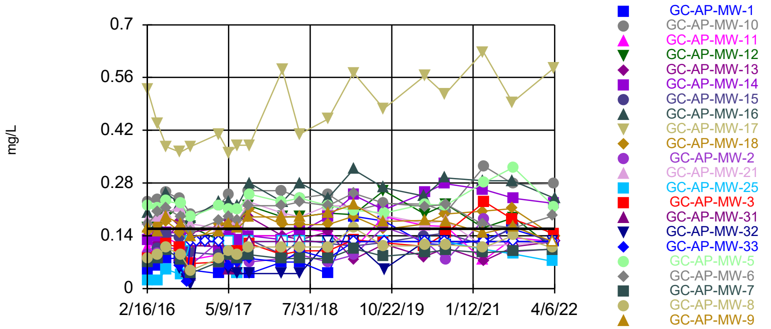
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG
Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-10, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-5, GC-AP-MW-6

Prediction Limit

Interwell Non-parametric



Limit = 0.159

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 127 background values. 69.29% NDs. Annual per-constituent alpha = 0.00533. Individual comparison alpha = 0.0001215 (1 of 2). Comparing 22 points to limit.

Constituent: Fluoride Analysis Run 6/1/2022 1:03 PM View: AIII

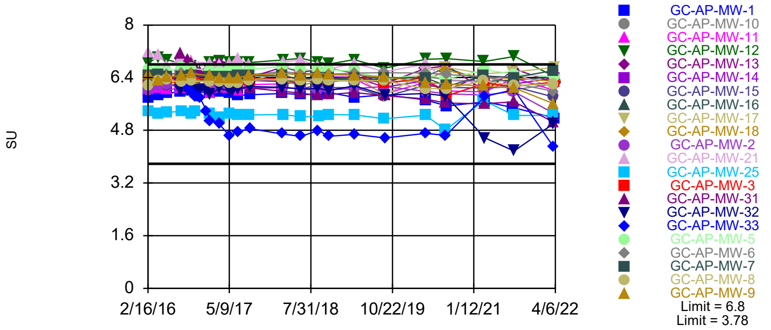
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Within Limits

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 157 background values. Annual per-constituent alpha = 0.006983. Individual comparison alpha = 0.000159 (1 of 2). Comparing 22 points to limit.

Constituent: pH Analysis Run 6/1/2022 1:03 PM View: AIII

Plant Greene County Client: Southern Company Data: Greene County AP

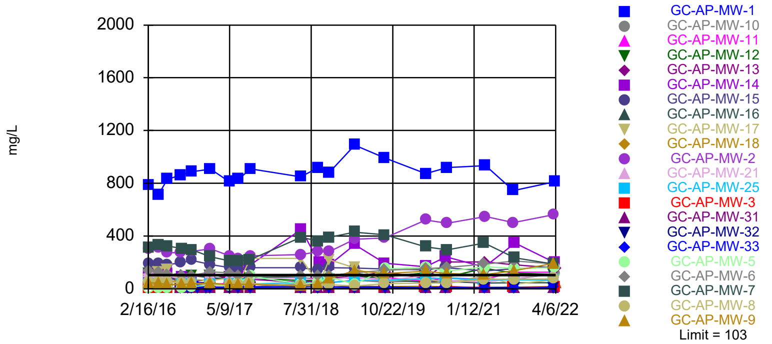
Sanitas™ v.9.6.34 . UG

Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 133 background values. 22.56% NDs. Annual per-constituent alpha = 0.004874. Individual comparison alpha = 0.000111 (1 of 2). Comparing 22 points to limit.

Constituent: Sulfate Analysis Run 6/1/2022 1:03 PM View: AIII

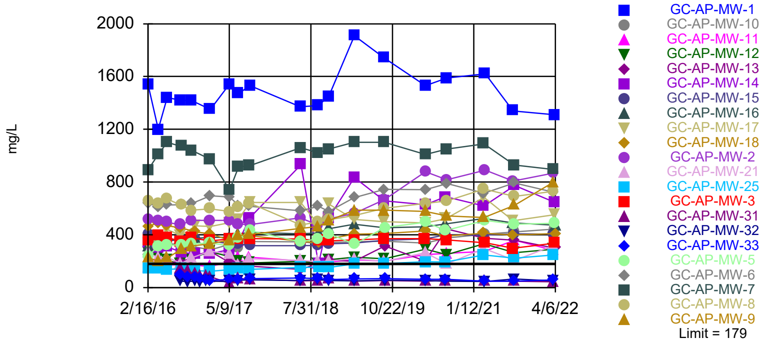
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 133 background values. 15.79% NDs. Annual per-constituent alpha = 0.004874. Individual comparison alpha = 0.000111 (1 of 2). Comparing 22 points to limit.

Sanitas™ v.9.6.34 . UG

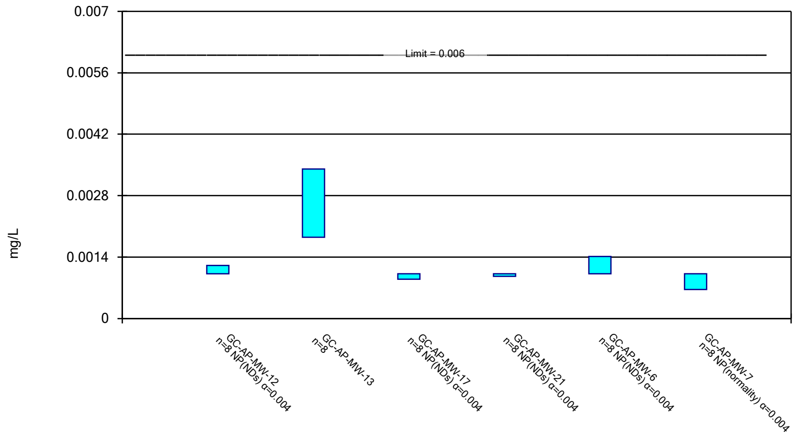
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



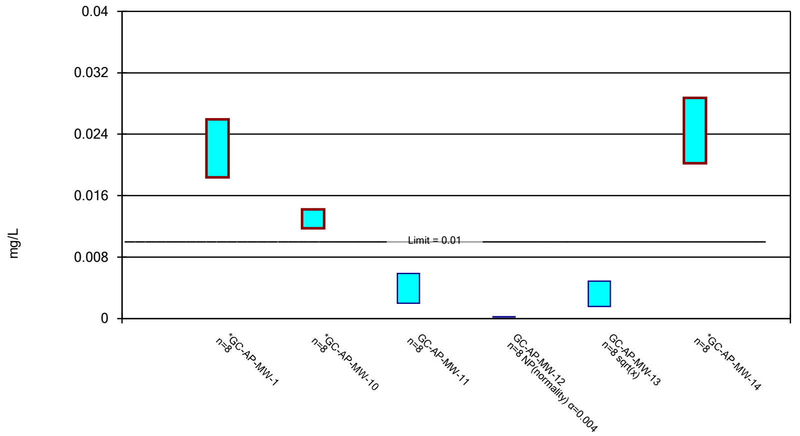
Constituent: Antimony   Analysis Run 6/10/2022 1:03 PM   View: AIV

Plant Greene County   Client: Southern Company   Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



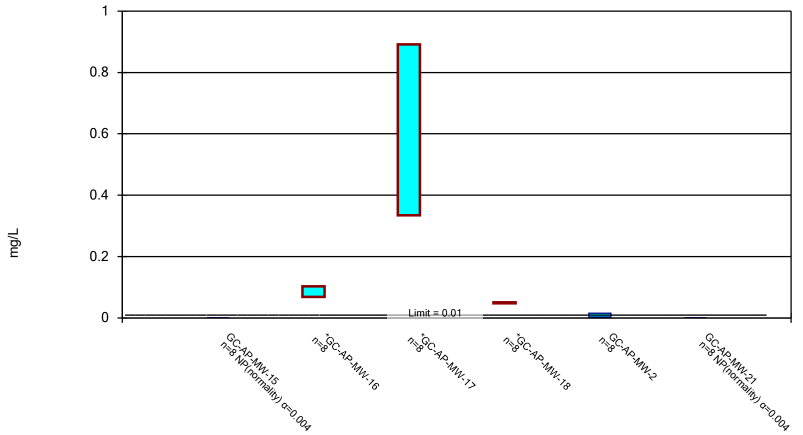
Constituent: Arsenic   Analysis Run 6/10/2022 1:03 PM   View: AIV

Plant Greene County   Client: Southern Company   Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



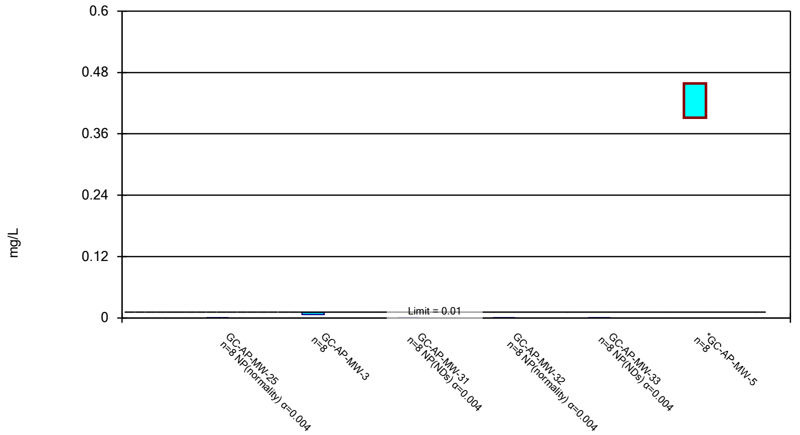
Constituent: Arsenic   Analysis Run 6/10/2022 1:03 PM   View: AIV

Plant Greene County   Client: Southern Company   Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



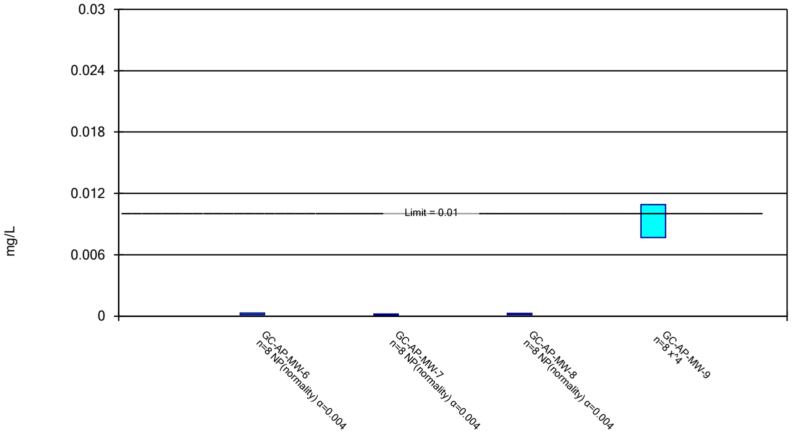
Constituent: Arsenic   Analysis Run 6/10/2022 1:03 PM   View: AIV

Plant Greene County   Client: Southern Company   Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

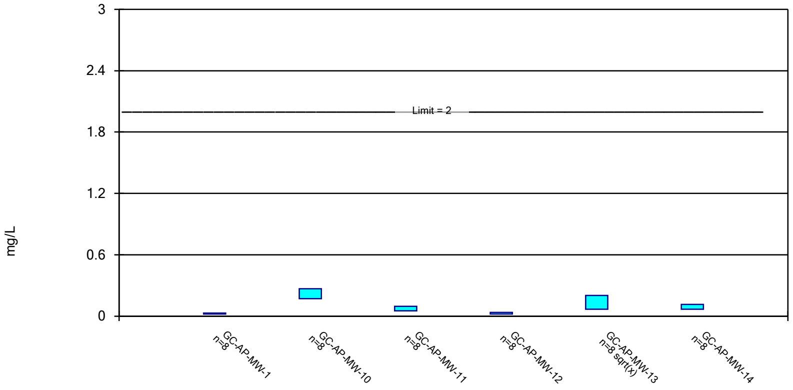


Constituent: Arsenic Analysis Run 6/10/2022 1:03 PM View: AIV
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

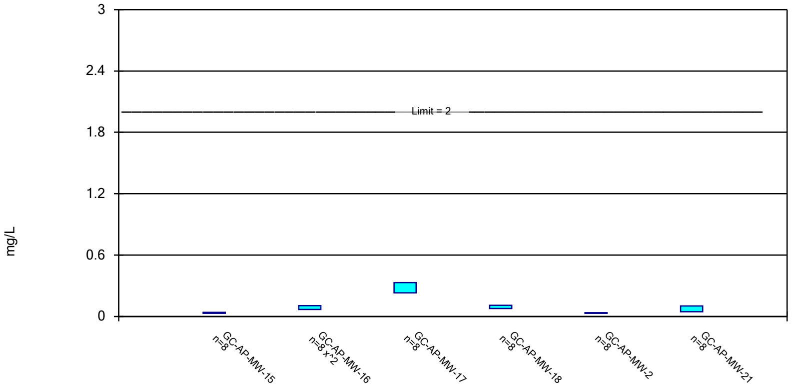


Constituent: Barium Analysis Run 6/10/2022 1:03 PM View: AIV
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

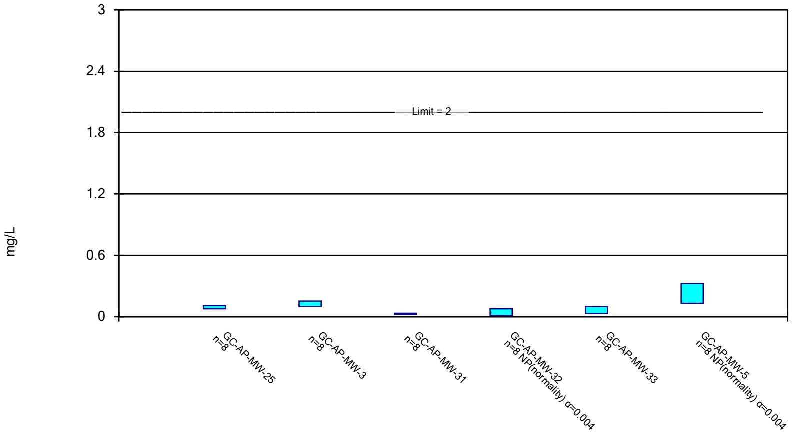


Constituent: Barium Analysis Run 6/10/2022 1:03 PM View: AIV
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

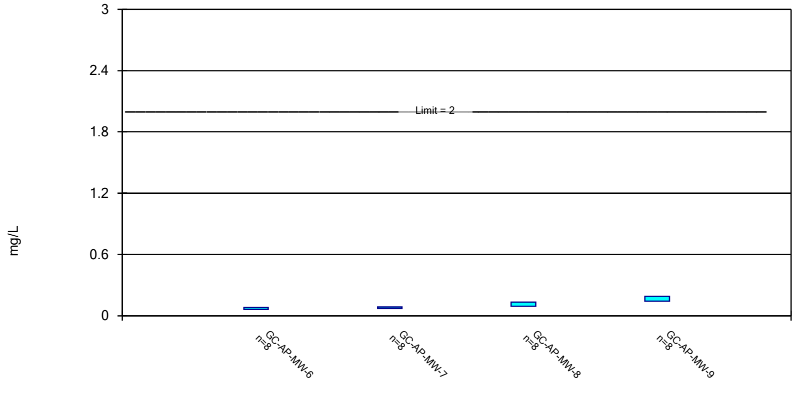


Constituent: Barium Analysis Run 6/10/2022 1:03 PM View: AIV
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



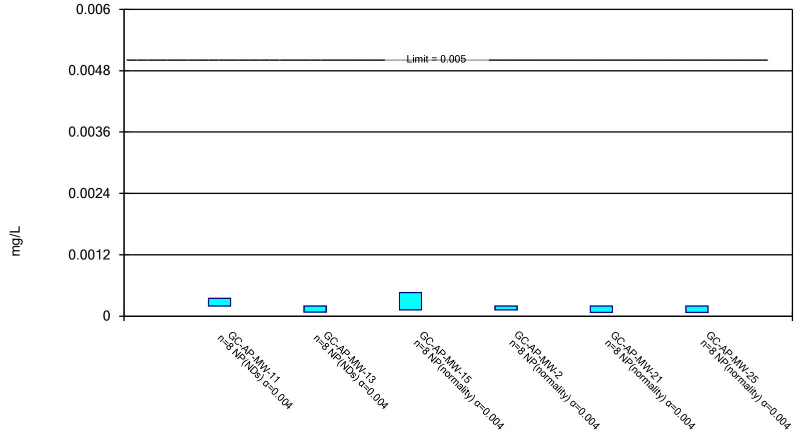
Constituent: Barium Analysis Run 6/10/2022 1:03 PM View: AIV

Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



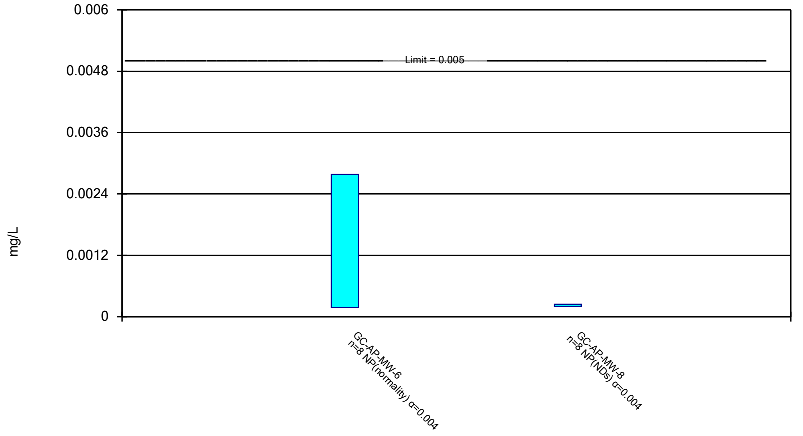
Constituent: Cadmium Analysis Run 6/10/2022 1:03 PM View: AIV

Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



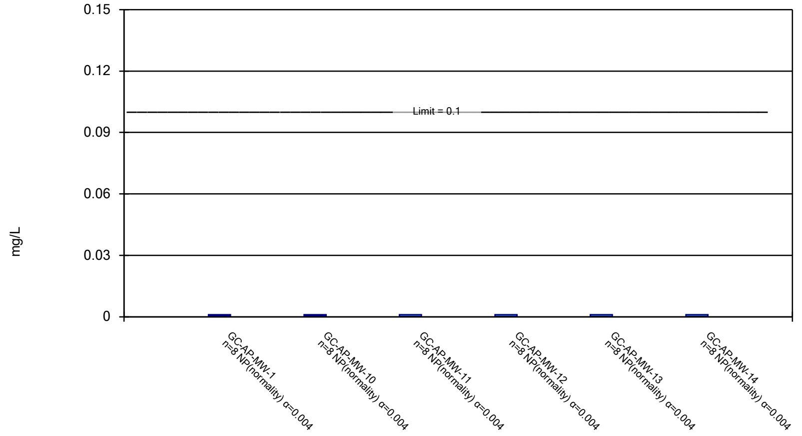
Constituent: Cadmium Analysis Run 6/10/2022 1:03 PM View: AIV

Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



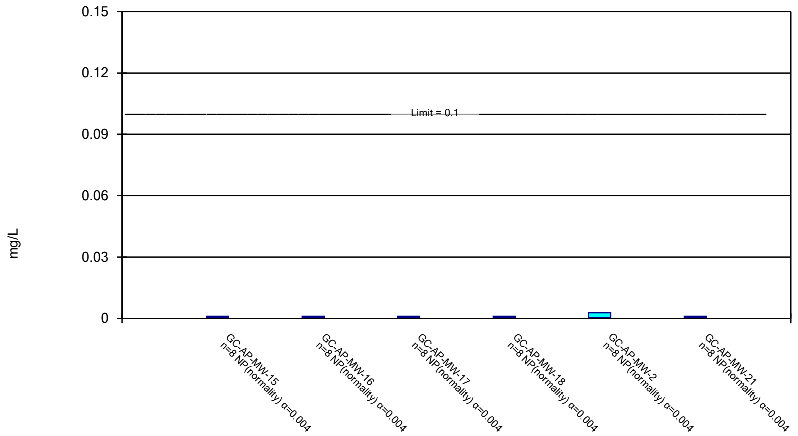
Constituent: Chromium Analysis Run 6/10/2022 1:03 PM View: AIV

Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



Constituent: Chromium Analysis Run 6/10/2022 1:03 PM View: AIV
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.34 . UG

GROUNDWATER STATS
CONSULTING

December 13, 2022

Southern Company Services
Attn: Mr. Greg Dyer
3535 Colonnade Parkway
Birmingham, AL 35243

Re: Plant Greene County Ash Pond
2nd Semi-Annual Event - October 2022

Dear Mr. Dyer,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater data for the October 2022 2nd semi-annual sample event for Alabama Power Company's Plant Greene County Ash Pond. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015) as well as with the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling began at this site for the CCR program in 2016. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-26, GC-AP-MW-27, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30

- **Downgradient wells:** GC-AP-MW-1, GC-AP-MW-2, GC-AP-MW-3, GC-AP-MW-5, GC-AP-MW-6, GC-AP-MW-7, GC-AP-MW-8, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, GC-AP-MW-21, GC-AP-MW-25, GC-AP-MW-31, GC-AP-MW-32, and GC-AP-MW-33

- **Delineation wells:** GC-AP-PZ-4, GC-AP-MW-34HA, GC-AP-MW-35H, GC-AP-MW-36H, GC-AP-MW-37H, GC-AP-MW-38H, GC-AP-MW-39H, GC-AP-MW-40H, GC-AP-MW-41H, GC-AP-MW-42H, GC-AP-MW-43H, GC-AP-MW-44H, GC-AP-MW-45H, GC-AP-MW-46HO, GC-AP-MW-47HO, GC-AP-MW-48H, GC-AP-MW-49H, GC-AP-MW-50HO, GC-AP-MW-52HO, GC-AP-MW-53H, GC-AP-MW-54H, GC-AP-MW-55HO, GC-AP-MW-57H, GC-AP-MW-59HO, GC-AP-MW-60HO, GC-AP-MW-61HO, GC-AP-MW-62HO, GC-AP-MW-63HO, and GC-AP-MW-64HO

Note that delineation wells do not require statistics; therefore, data are plotted only on time series and box plots. Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was prepared according to the Statistical Analysis Plan approved by Dr. Kirk Cameron, Ph.D. Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance, and Senior Advisor to Groundwater Stats Consulting. The analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting.

The CCR program consists of the following constituents:

Appendix III (Detection Monitoring) - boron, calcium, chloride, fluoride, pH, sulfate, and TDS
Appendix IV (Assessment Monitoring) - antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A list of Appendix IV downgradient well/constituent pairs containing 100% non-detects follows this letter.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). A substitution of the most recent reporting limit is used for non-detect data. Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells.

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on analysis of the spatial variability of groundwater quality data among wells upgradient of the facility;

and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. The power curve provided in this report demonstrates that the selected statistical methods for Appendix III parameters complies with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves are based on the following statistical methods and site/data characteristics:

- Semi-Annual Sampling
- Interwell Prediction Limits with 1-of-2 resample plan
- # Background Samples: 133
- # Constituents: 7
- # Downgradient wells: 22

Summary of Statistical Methods – Appendix III Parameters

Based on the earlier evaluation described above, interwell prediction limits were utilized in the analysis of this site.

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the annual false positive rate associated with parametric limits is fixed at 10% as recommended by the EPA Unified Guidance (2009), the false-positive rate associated with nonparametric limits is not fixed and depends upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits as appropriate.

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects in background, simple substitution of one-half of the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.

- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data following each sampling event after careful screening for any new outliers. While not required for this report, in some cases, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Background Update Summary

Interwell prediction limits, which compare the most recent sample from each downgradient well to statistical limits constructed from pooled upgradient well data, are updated during each sample event. Data from upgradient wells are periodically re-screened for newly developing trends, which may require adjustment of the background period to eliminate trends, as well as for outliers over the entire record. Interwell prediction limits are used to evaluate boron, calcium, chloride, fluoride, pH, sulfate, and TDS.

Proposed background data at upgradient wells were originally screened for outliers and trends in May 2019 for the constituents listed above. Both Tukey's Test and visual screening were used to identify potential outliers. When identified, values were flagged with "o" and excluded to reduce variation, better represent background conditions, and provide limits that are conservative from a regulatory perspective. Potential outliers that were identified by Tukey's test but were not greatly different from the rest of the data were not flagged. Also, outliers that are not identified as important by Tukey's test may be identified visually and flagged in the database for construction of more conservative (lower) statistical limits.

All flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. A summary of previously flagged values follows this letter.

The Sen's Slope/Mann Kendall trend test was used to evaluate the entire record of data from upgradient wells during the original screening for parameters utilizing interwell prediction limits. When statistically significant increasing trends are identified in upgradient wells, deselection of the earlier portion of data may be required prior to construction of interwell statistical limits if the trending data would result in statistical limits that are not conservative from a regulatory perspective. Several statistically significant trends were noted in upgradient wells, and the results were submitted with the September 2019 background update. These trends required no adjustments, however, because the period of record was short and/or the magnitudes of the trends were low relative to the average concentrations in background.

One exception was upgradient well GC-AP-MW-24 which had statistically significantly increasing trends for calcium, sulfate, and TDS. However, the more recent reported observations for calcium and TDS were similar to those observed in upgradient well GC-AP-MW-23; therefore, no adjustments were required for these constituents. Additionally, no adjustment was required for sulfate since the statistical limit resulted in a nonparametric prediction limit which is constructed based on the highest report concentration among the upgradient wells. All data at upgradient wells are continually monitored, as mentioned earlier, and will be adjusted in future analyses as necessary. A summary of any adjusted records will accompany the report.

Evaluation of Appendix III Parameters – October 2022

Outlier Screening

Prior to performing prediction limits, background (upgradient) well data for Appendix III constituents were re-assessed for potential outliers and trends during this analysis. No new values were flagged and no adjustments were required to account for trending data. Values in background which have been previously flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits combined with a 1-of-2 verification strategy were constructed for all Appendix III parameters (Figure D). Interwell prediction limits pool upgradient well data through October 2022 to establish a background limit for an individual constituent. The most recent sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When the resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If a resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no further action is necessary. When no resamples are collected, any initial exceedances are considered SSIs. A summary of the prediction limits results may be found in the Prediction Limit Summary tables following this letter (pages 12-16). Several exceedances for interwell prediction limits were identified.

Trend Tests – Prediction Limit Exceedances

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of natural variability in groundwater which may be unrelated to practices at the site. A summary of the trend test results follows this letter (pages 17-20). Statistically significant trends were identified for the following well/constituent pairs:

Increasing:

- Boron: GC-AP-MW-5, GC-AP-MW-9, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-25
- Calcium: GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17 and GC-AP-MW-24 (upgradient)
- Chloride: GC-AP-MW-7, GC-AP-MW-9, and GC-AP-MW-18
- Fluoride: GC-AP-MW-14, GC-AP-MW-16, and GC-AP-MW-17
- Sulfate: GC-AP-MW-24, GC-AP-MW-28 (both upgradient), GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, and GC-AP-MW-14
- TDS: GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-24 (upgradient), and GC-AP-MW-25

Decreasing:

- Boron: GC-AP-MW-6 and GC-AP-MW-18
- Calcium: GC-AP-MW-23, GC-AP-MW-28, GC-AP-MW-29, GC-AP-MW-30 (all upgradient),
  and GC-AP-MW-1
- Chloride: GC-AP-MW-5, GC-AP-MW-14, and GC-AP-MW-23 (upgradient)
- pH: GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-27, GC-AP-MW-28,
  GC-AP-MW-29, GC-AP-MW-30 (all upgradient)
- Sulfate: GC-AP-MW-23 (upgradient) and GC-AP-MW-15
- TDS: GC-AP-MW-23, GC-AP-MW-28 and GC-AP-MW-29 (all upgradient)

Evaluation of Appendix IV Parameters – October 2022

Data from all upgradient wells for Appendix IV parameters were reassessed for outliers during the previous analysis. No changes to previously flagged outliers were made. A summary of previously flagged outliers follows this report (Figure C).

In accordance with Alabama Department of Environmental Management, the Groundwater Protections Standards (GWPS) were updated during the 2021 2nd semi-annual statistical analysis. The GWPS will be updated again during the 2023 2nd semi-annual statistical analysis. The methodology used to create these GWPS is described below.

Interwell Upper Tolerance Limits

First, background limits were determined using upper tolerance limits (UTLs) constructed from pooled upgradient well data through August 2021 (Figure F). The tolerance limits contain a known fraction (coverage) of the background population with a known level of confidence. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples. As requested by ADEM to eliminate variation among upgradient well data, nonparametric tolerance limits, which use the highest value in background as the statistical limit, were constructed. A summary of the upper tolerance limits follows this letter (page 21).

Groundwater Protection Standards

These background limits are then compared to the Maximum Contaminant Levels (MCLs) for each parameter, and the higher of the two is used as the GWPS (Figure G, page 22) in the confidence interval comparisons described below.

Confidence Intervals

Confidence intervals were then constructed on downgradient wells using a maximum of the most recent 8 samples through October 2022 for each of the Appendix IV parameters (Figure H). These intervals were either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the highest and lowest values in background as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. Note that a resample was collected in May 2022 for selenium in downgradient well GC-AP-MW-13 due to the spurious result of 0.111 mg/L reported during the April 2022 sample event. The resample resulted in a reported measurement of 0.0452 mg/L. Therefore, the April 2022 concentration was flagged as an outlier and was not included in construction of the confidence interval.

As mentioned above, well/constituent pairs containing 100% non-detects in the most recent 8 samples did not require statistics; therefore, they were deselected prior to construction of confidence intervals. A list of deselected well/constituent pairs follows this report. Each confidence interval was compared with the corresponding GWPS. Only when the entire confidence interval is above the GWPS is the well/constituent pair considered to exceed its respective standard. Both a tabular summary and graphical presentation of the confidence interval results follow this letter (pages 23-26). Exceedances were noted for the following well/constituent pairs:

- Arsenic: GC-AP-MW-1, GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-18
- Cobalt: GC-AP-MW-1, GC-AP-MW-14, and GC-AP-MW-15
- Lithium: GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, and GC-AP-MW-21

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Greene County Ash Pond. If you have any questions or comments, please feel free to contact us.

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2019.

Sanitas™ v.9.6.36 . UG
Hollow symbols indicate censored values.

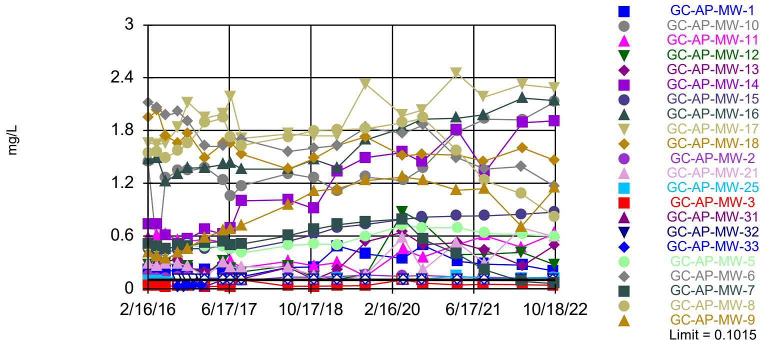
Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 133 background values. 93.98% NDs. Annual per-constituent alpha = 0.004874. Individual comparison alpha = 0.000111 (1 of 2). Comparing 22 points to limit.

Constituent: Boron Analysis Run 12/9/2022 10:43 AM View: AIII

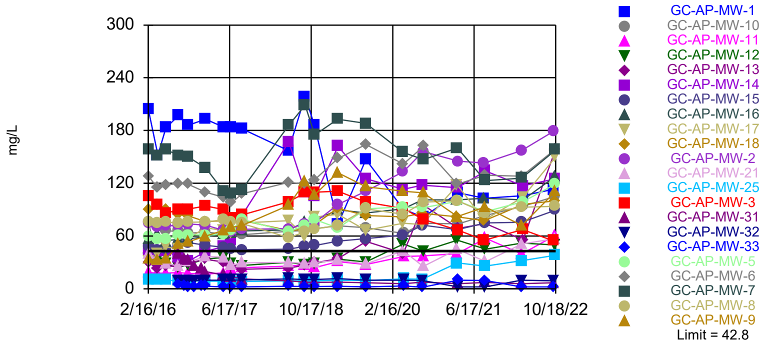
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.36 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 140 background values. Annual per-constituent alpha = 0.004341. Individual comparison alpha = 0.00009888 (1 of 2). Comparing 22 points to limit.

Constituent: Calcium Analysis Run 12/9/2022 10:43 AM View: AIII

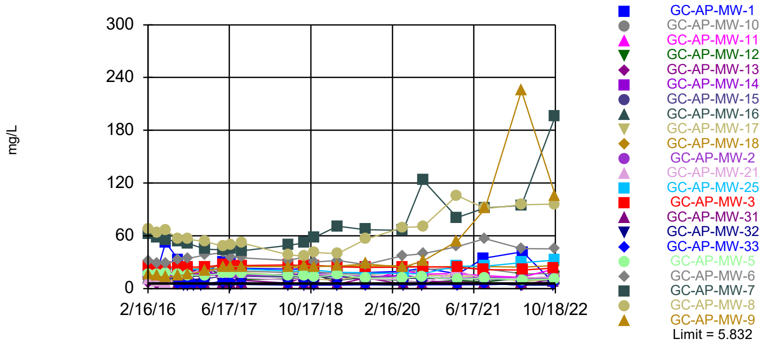
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.36 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Parametric



Background Data Summary (based on natural log transformation): Mean=0.7493, Std. Dev.=0.4779, n=140, 3.571% NDs. Normality test: Chi Squared @alpha = 0.01, calculated = 10.57, critical = 14.07. Kappa = 2.122 (c=7, w=22, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.000342. Comparing 22 points to limit.

Constituent: Chloride Analysis Run 12/9/2022 10:43 AM View: AIII

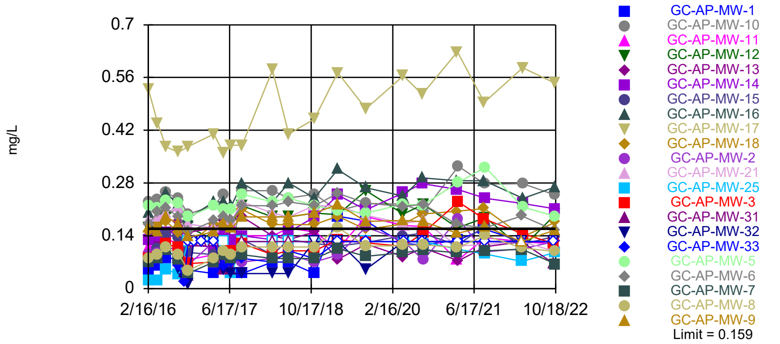
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.36 . UG
Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-10, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, GC-AP-MW-5

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 134 background values. 70.15% NDs. Annual per-constituent alpha = 0.004798. Individual comparison alpha = 0.0001093 (1 of 2). Comparing 22 points to limit.

Constituent: Fluoride Analysis Run 12/9/2022 10:43 AM View: AIII

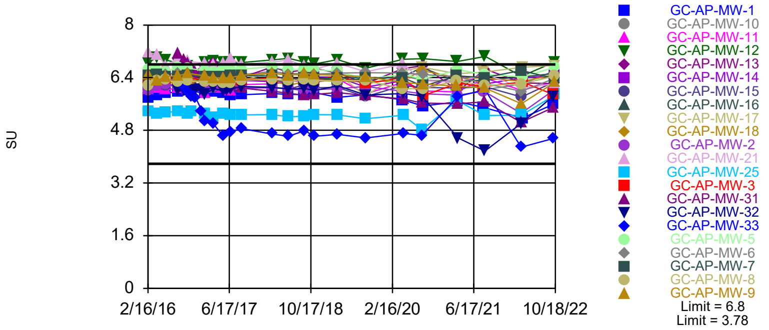
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.36 . UG

Exceeds Limits: GC-AP-MW-12

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 164 background values. Annual per-constituent alpha = 0.006407. Individual comparison alpha = 0.0001459 (1 of 2). Comparing 22 points to limit.

Constituent: pH Analysis Run 12/9/2022 10:43 AM View: AIII

Plant Greene County Client: Southern Company Data: Greene County AP

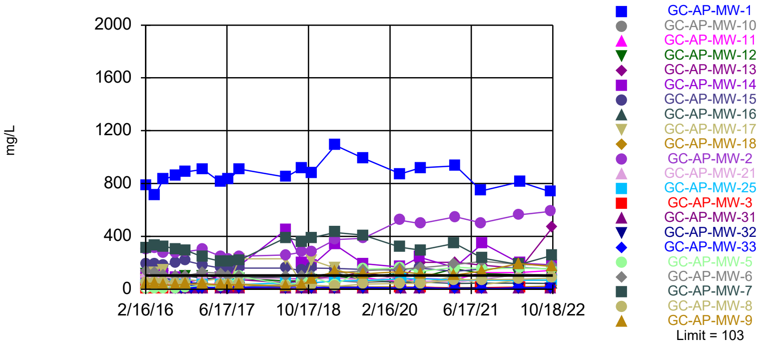
Sanitas™ v.9.6.36 . UG

Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-2,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 140 background values. 21.43% NDs. Annual per-constituent alpha = 0.004341. Individual comparison alpha = 0.00009888 (1 of 2). Comparing 22 points to limit.

Constituent: Sulfate Analysis Run 12/9/2022 10:43 AM View: AIII

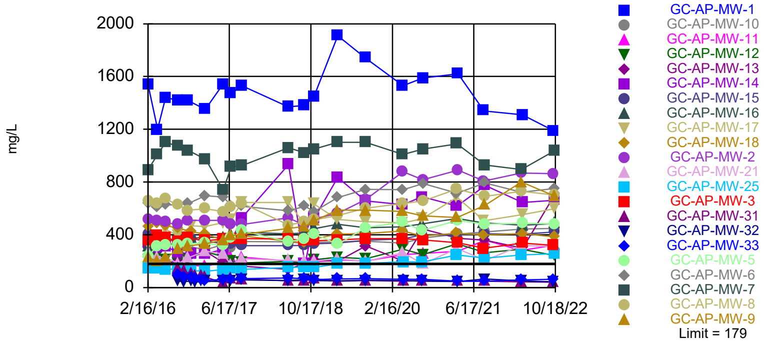
Plant Greene County Client: Southern Company Data: Greene County AP

Sanitas™ v.9.6.36 . UG

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 140 background values. 15.71% NDs. Annual per-constituent alpha = 0.004341. Individual comparison alpha = 0.00009888 (1 of 2). Comparing 22 points to limit.

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2019.

Executive Summary

As described in the *Groundwater Remedy Selection Report* (Anchor QEA 2021a), geochemical manipulation via injections was selected as one corrective measure for arsenic, cobalt, and lithium in groundwater at the Greene County Electric Generating Plant (Plant Greene County) Ash Pond (Site) located in Greene County, Alabama. Geochemical manipulation was selected because of its effectiveness, ease of implementation, versatility (ability to treat more than one constituent of interest [COI]), ability to implement in areas with limited working space, and because it produces no byproducts that would require further treatment or disposal. Treatability studies were performed to determine the optimum reagents and their doses and to provide information for the required underground injection control permit and design of the injection treatment at the Site.

Treatability studies for injection treatment (geochemical manipulation) at the Site consisted of the following steps:

- Sampling and characterization of aquifer soil and groundwater
- Batch tests, both screening and optimization
- Column tests, including treatment effectiveness and post-treatment leaching to determine stability
- Selective sequential extraction (SSE) on post-treatment soils

Aquifer soil and groundwater samples were collected from multiple areas, based on number and concentrations of COIs, to help select areas for field pilot testing. Geochemical characterization of aquifer soils was performed to support the design and interpretation of the treatability testing. Homogenized soil samples were analyzed for the COIs (arsenic, cobalt, and lithium), other Appendix IV parameters, iron, manganese, sulfide, and total organic carbon. Extractable aluminum, iron, and manganese oxides, and cation exchange capacity in aquifer soils were also measured. Physical testing included percent moisture content and grain size distribution (gravel, sand, silt, and clay).

Groundwater samples were analyzed for major cations, anions, the COIs and other Appendix III/IV parameters, and water quality parameters influencing the chemical behavior of the COIs. Prior to beginning treatability testing, confirmatory analysis of the COIs and dissolved iron and manganese concentrations was performed. Aquifer soil samples were paired with their respective groundwater samples based on their sampling location proximity. Those pairs were used throughout batch and column testing.

Based on previous successful treatability studies at other sites and geochemical studies performed as part of remedy selection (Anchor QEA 2021a), a series of batch tests was performed to determine the effectiveness and to rank the performance of the selected reagents in reducing the COI concentrations in Site groundwater and groundwater-soil slurries. All batch tests were conducted with the following two configurations: 1) groundwater batch tests; and 2) slurry batch tests. In groundwater batch tests, reagents were added to test bottles filled with Site groundwater only. In slurry batch tests, the paired aquifer soils were mixed with the Site groundwaters to prepare slurries in test bottles, and then reagents were added to the test bottles. Slurry tests were performed because the aquifer solids could influence the performance of the tested reagents.

In the screening batch tests, eight reagents, plus aeration, were initially tested. More than one reagent effectively removed arsenic and cobalt from Site groundwaters and slurries. Aeration generally removed arsenic and, to a lesser extent, cobalt. As none of the reagents achieved sufficient lithium removal at the tested doses in the screening tests, lithium removal became a major objective of the optimization batch tests. Improvement in lithium treatment included increasing doses of selected reagents, adjusting solution pH, and testing five new reagents that have a potential to remove lithium. A commercial iron-based product FerroBlack-Fe+ (FerroBlack) effectively removed arsenic and cobalt, but not lithium, during batch tests. Reagent Mix C (manganese chloride [$MnCl_2$] + ferric chloride [$FeCl_3$] + magnesium chloride [$MgCl_2$] solution, followed by sodium aluminate [$NaAlO_2$] + potassium permanganate [$KMnO_4$] solution and sodium hydroxide [NaOH] for pH adjustment) showed the best lithium removal performance. FerroBlack and Reagent Mix C were, therefore, retained for column tests.

Column tests were conducted to simulate injection applications of the selected reagents and to evaluate the COI removal performance of aquifer soils treated with the selected reagents under flow conditions. Column tests more closely simulate treatment under groundwater flow conditions than batch tests and provide information on removal effectiveness and capacity, as well as the stability of the reagents under conditions representative of a field treatment application. Column test results are also used to provide data to support pilot test design and confirm the selected reagents will not inadvertently increase concentrations of other Appendix III/IV constituents above the groundwater protection standard (GWPS) due to, for example, release from the aquifer matrix. The two reagents selected from the batch tests (Reagent Mix C and FerroBlack) were mixed with aquifer soils to produce treated soils. Impacted groundwater was then run through the treated soils in columns to assess removal effectiveness and capacity for treatment.

Both Reagent Mix C and FerroBlack effectively removed arsenic from impacted groundwater during column studies, removing an average of >90% of the influent mass and achieving the GWPS in all studies. Reagent Mix C was more effective than FerroBlack at removing cobalt and lithium during column studies. In the two most successful column studies for cobalt using Reagent Mix C, 95% to 100% of the influent mass was removed, and concentrations were reduced to less than the GWPS for the duration of the studies. In the column studies for lithium using Reagent Mix C, 20% to 35% of the influent mass was removed, but the GWPS was only reached in half of the studies. Injection treatment is only one component of the remedy, as source control (slurry wall, consolidation, and capping) and natural attenuation are also expected to reduce concentrations of COIs in groundwater (Anchor QEA 2021a).

After column studies were complete, Site background groundwater was run through the columns to determine the stability of each treatment. During this phase of testing, the COI concentrations in the effluents were lower than the effluents from the previous treatment phase and decreased over time. Therefore, treatment is expected to be stable and Appendix III/IV constituents are not expected to be mobilized from aquifer soils by ambient groundwater flow after treatment.

Following completion of the column tests, the treated aquifer soils were tested to help evaluate the long-term stability of sequestered COIs using a five-step SSE procedure. In SSE, increasingly aggressive extraction solutions formulated to identify specific binding mechanisms are run through the treated aquifer soils to help determine the mechanisms, strength of binding, and stability (or reversibility) of the COI uptake by host solids.

SSE results indicate arsenic and cobalt are bound almost exclusively (near 100%) in stable solid phases—specifically, phases containing poorly crystalline metal oxides such as iron and manganese oxides, crystalline metal oxides, and residual phases (dissolvable only with concentrated strong acids). The associations with metal oxides were expected and indicate successful treatment, as the metals were major components of the treatment solutions. Lithium is somewhat less stable, with 65% to 90% being associated with stable phases such as poorly crystalline and crystalline metal oxides, and the remaining 10% to 35% being associated with the less-stable water-soluble fractions.

Reagent Mix C was selected for pilot testing at locations where lithium is present in groundwater, including locations with lithium and arsenic or cobalt, as Reagent Mix C is effective for arsenic and cobalt, as well as lithium. However, one component of Reagent Mix C, $KMnO_4$, was effective alone for arsenic and cobalt. Therefore, batch optimization and column tests are currently planned for permanganate for areas without lithium to simplify field implementation of injection treatment in those areas.

1 Introduction

As discussed in the *Groundwater Remedy Selection Report* (Anchor QEA 2021a), geochemical manipulation via injections was selected as one corrective measure for constituents of interest (COIs) at the Greene County Electric Generating Plant (Plant Greene County) Ash Pond (Site), located in Greene County, Alabama. COIs at the Site are arsenic, cobalt, and lithium. Geochemical manipulation removes COIs from groundwater and immobilizes them in situ through the creation of solid precipitates formed from injection of treatment solutions (reagents). COIs adhere to the solid surfaces and are incorporated into the solid structures. Geochemical manipulation was selected because of its effectiveness, ease of implementation, versatility (ability to treat more than one COI), ability to implement in areas with limited working space, and because it produces no byproducts that would require further treatment or disposal. Before geochemical manipulation via injection treatment can be implemented, laboratory treatability studies were performed using the Site aquifer media and impacted groundwater.

The site-specific treatability studies discussed herein were conducted to evaluate reagent selection, dosing, and injection sequencing for in situ groundwater remediation. The treatability study approach includes the following:

- Sampling and characterization (analysis) of aquifer soil and groundwater
- Batch tests (screening batch tests, followed by optimization batch tests) to identify and rank reagents and reagent mixtures for removal of COIs from Site groundwater
- Selection of the two best-performing reagents for column testing to:
  - Assess COI removal effectiveness
  - Determine COI uptake capacity of reagent-treated aquifer soil to support pilot test design
- Confirm the selected reagents will not inadvertently increase concentrations of other Appendix III/IV constituents above the groundwater protection standard (GWPS) due to, for example, release from the aquifer matrix.
- Determine the stability of each treatment by:
  - Selective sequential extraction (SSE) of post-column-treated soil to provide information on the mechanisms and stability of COI sequestration
  - Running Site background groundwater through treated soils in the columns to assess potential for rerelease of COIs

2 Selection of Reagents

Selection and formulation of reagents that can be injected to treat site-specific COIs were based on site-specific soil and groundwater geochemistry, previous Site work, and prior experience from successful treatability studies performed by Anchor QEA, LLC, for the same COIs at other sites for confidential clients. The *Monitored Natural Attenuation Demonstration* (Anchor QEA 2021b) documented key geochemical attenuation mechanisms occurring at the Site, including the following:

- Sorption on and/or coprecipitation with iron oxides for arsenic and cobalt
- Cation exchange on oxides and clay minerals for lithium
- Precipitation of barium arsenate for arsenic (predicted by geochemical modeling)

Iron oxides are strong sorbents for many metals and metalloids, including arsenic (Dixit and Hering 2003; Mohan and Pittman 2007) and cobalt (Ainsworth et al. 1994). Subsurface geochemical conditions at the Site are generally favorable for formation of iron oxides. Lithium has an affinity for manganese and other metal oxides (Ooi et al. 1988; Yu et al. 2022). Therefore, the treatability studies were initially focused on reagents (or mixtures of reagents) with the potential to increase the abundance and stability of iron and/or manganese oxides and hydroxides in the subsurface. Based on Site conditions and treatability studies previously completed for other sites, the following reagents were initially selected for treatability testing:

- Ferrous sulfate ($FeSO_4$)
- Ferric chloride ($FeCl_3$)
- CleanER-10 (injectable zero-valent iron)
- FerroBlack-Fe+ (FerroBlack; injectable iron sulfide)
- Potassium permanganate ($KMnO_4$)
- Ferrous sulfate and potassium permanganate ($FeSO_4$ + $KMnO_4$)
- Ferric chloride with potassium permanganate and manganese chloride ($FeCl_3$ + $KMnO_4$ and $MnCl_2$)
- Barium chloride ($BaCl_2$)
- Aeration

Soluble iron reagents such as $FeSO_4$ and $FeCl_3$ are acidic and form iron oxides/hydroxides such as ferrihydrite ($Fe(OH)_3$) when neutralized. Iron oxides/hydroxides can adsorb and/or coprecipitate with arsenic and cobalt. Zero valent iron, specifically CleanER-10, was tested because it oxidizes to form iron oxides/hydroxides over time that can remove arsenic (Biterna et al. 2007) and heavy metals (Moraci and Calabrò 2010).

FerroBlack is a proprietary amendment from Redox Solutions. The active ingredient in FerroBlack is likely iron monosulfide, which immobilizes arsenic through adsorption at low arsenic concentrations, and precipitation/mineralization of arsenic sulfides at higher arsenic concentrations

(Niazi and Burton 2016). Cobalt is also likely to be removed through similar mechanisms by ferrous sulfide (FeS).

Permanganate has been widely used for in situ chemical oxidation. Permanganate reacts with soil components to produce manganese oxides, which can adsorb and incorporate COIs (Hou et al. 2017; Al Abdullah et al. 2016; Le and Phuc 2015).

Barium chloride was included in the reagent list because geochemical modeling indicated conditions were favorable for barium arsenate precipitation from groundwater. Increasing the dissolved barium concentration would, therefore, be expected to reduce arsenic concentrations.

Aeration was also included since Site groundwater generally contains high concentrations of dissolved iron (Section 3.1.2). Oxidation of dissolved iron by dissolved oxygen (DO) promotes iron (hydr)oxide formation and COI removal.

The following reagents were not initially included in the work plan but subsequently added to the reagent list specifically for lithium removal:

- Dolomite fines (Helena Quarry)
- Dolomite fines (Lakeshore Quarry)
- Dolomitic quicklime (Carmeuse)
- Hydrotalcite (Kisuma Chemicals B.V.)
- Magnesium chloride and sodium aluminate ($MgCl_2$ + $NaAlO_2$)

Dolomite from two different quarries in Central Alabama (Helena Quarry and Lakeshore Quarry) and dolomitic quicklime were added to the reagent list (based on treatability study results for another site in another state) and tested to assess their potential for lithium removal. Hydrotalcite is a magnesium/aluminum layered double hydroxide that can take up a wide range of cations and anions from water (Douglas 2014). Previous treatability studies performed by Anchor QEA documented that commercially available hydrotalcite effectively removed lithium. Hydrotalcite can also be precipitated from solution by mixing magnesium chloride ($MgCl_2$) and sodium aluminate ($NaAlO_2$). Both commercially available hydrotalcite and the injectable reagents ($MgCl_2$ + $NaAlO_2$) were tested to assess effectiveness in reducing lithium concentrations in Site groundwater.

The full list of reagents (or reagent combinations) tested and vendor sources is included in Table 1. The effectiveness of these treatments on COI removal was screened and evaluated through a series of batch tests. The most promising reagents (or mixtures) were selected for column testing. Prior to initiating the column studies, selected reagents were analyzed for Appendix III/ IV parameters to characterize impurity levels of these constituents (Section 5).

3 Sampling and Initial Characterization

Groundwater samples and aquifer soil were collected from the Site for treatability testing conducted at the Anchor QEA Environmental Geochemistry Laboratory (EGL) in Portland, Oregon.

3.1 Groundwater

3.1.1 Sample Collection

Groundwater samples were collected by Alabama Power Company with support from Anchor QEA from wells GC-AP-MW-1, GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-14, GC-AP-MW-17, and GC-AP-MW-44H (Figure 1). Five gallons of groundwater were collected from each well on April 4, 2022, for batch tests. An additional 10 gallons of groundwater from each well (plus an upgradient well GC-AP-MW-23) were collected on August 29 and 30, 2022, for column testing.

Prior to sampling, monitoring wells were purged until water quality parameters (pH, temperature, specific conductance, oxidation reduction potential [ORP], and DO) stabilized. Then, groundwater samples were collected in low-density polyethylene Cubitainers. Cubitainers were filled with zero headspace and packed in Mylar barrier bags containing oxygen-absorbent packets to minimize potential changes in redox conditions during transport to the EGL. Anaerobic conditions were maintained during sample handling at the EGL.[1]

3.1.2 Sample Analysis and Results

Groundwater samples were analyzed for major cations, anions, the COIs, other Appendix III/IV parameters, and water quality parameters influencing the chemical behavior of the COIs (Table 2). Laboratory analytical reports are included in Appendix A. Prior to commencing treatability testing at the EGL, groundwater samples in the Cubitainers were subsampled and submitted to ALS Environmental in Kelso, Washington, for confirmatory analysis of the COIs and dissolved iron and manganese concentrations (Table 2). Water quality parameters including pH, ORP, and DO were measured at the EGL and are provided in Table 2. Although almost all parameters remained constant, dissolved arsenic concentrations in GC-AP-MW-5 and GC-AP-MW-17 decreased after the groundwater samples were shipped to EGL. This is probably due to iron (hydr)oxide precipitation and its arsenic uptake. Dissolved iron is redox sensitive and can be oxidized when exposed to atmospheric oxygen such as during sample collection and handling.

---

[1] Groundwater for the column studies was collected in a second mobilization. Samples were submitted for analyses of COIs.

3.2 Aquifer Soils

3.2.1 Sample Collection

Aquifer soil samples were collected on February 15 and 16, 2022, from potential pilot test locations (GC-AP-PT-1, -2, -3, -4, and -5) at the Site (Figure 1). The aquifer soil samples were collected using sonic drilling technology from areas and depths where injection treatment will be implemented. Those samples were selected in the field, packaged to preserve field redox conditions (airtight containers packed in Mylar bags with oxygen-absorbent packets), and shipped on ice to the EGL. Upon arrival at the EGL, aquifer soil samples were inspected and checked against the chain of custody and then stored under refrigeration until further processing.

3.2.2 Sample Analysis and Results

Geochemical characterization of aquifer soils was performed to support the design and interpretation of the treatability testing. Aquifer soil samples were composited and homogenized under a nitrogen atmosphere. The homogenized soil samples were subsampled and submitted to ALS Environmental for bulk chemical analyses, which include the COIs (arsenic, cobalt, and lithium), other Appendix IV parameters, iron, manganese, sulfide, and total organic carbon (Table 3). Extractable aluminum, iron, and manganese oxides and cation exchange capacity in aquifer soils were also measured (Tables 4 and 5) to characterize potential for intrinsic COI removal by soils and help with interpretation of batch test results.

Additional analyses included percent moisture content and grain size distribution (gravel, sand, silt, and clay; Table 6). Laboratory analytical reports are included in Appendix A. The surficial aquifer soil at the Site consists mostly of sand (83% to 94%), with minor silt and clay, so the surficial aquifer is hydraulically suitable for injection. Aquifer soil samples were paired with their respective groundwater samples based on their sampling location proximity. Those pairs were used throughout batch and column testing (Table 7). GC-AP-PT-5 aquifer soil had relatively higher concentrations of arsenic (8.43 milligrams per kilogram [mg/kg]) and cobalt (9.21 mg/kg) than other aquifer soils. The concentrations of other Appendix IV constituents in the aquifer soils were very low or not detected, indicating release from the reagent treatment will not likely release or remobilize those contaminants. Bulk iron concentrations of aquifer soils range from 2,970 to 6,550 mg/kg (Table 3). Extractable iron oxides generally correlate with bulk iron concentrations and account for 4% to 20% of the iron in soils, indicating a variable but potentially significant capacity of soils to remove COIs such as arsenic and cobalt.

4 Batch Tests

4.1 Methodology

A series of batch tests were performed to determine and rank the performance of the selected reagents in reducing the COI concentrations in Site groundwater. All batch tests were conducted with the following two configurations: 1) groundwater batch tests; and 2) groundwater-soil slurry batch tests. The slurry tests were included to assess the potential effect of the aquifer matrix on treatment effectiveness. In groundwater batch tests, reagents were added to test bottles filled with only Site groundwater. In slurry batch tests, the paired aquifer soils were mixed with the Site groundwater to prepare slurries in test bottles at a liquid-to-solid ratio of 10 (Table 7), then reagents were added to the test bottles. The performance of the reagents was evaluated by the COI removal effectiveness and the final COI concentrations relative to their GWPSs.

The batch tests were divided into the following two stages: 1) screening batch tests to assess and compare the effectiveness of all the reagents to remove the COIs; and 2) optimization batch tests to further examine the effectiveness of reagents retained from the screening batch tests by varying reagent doses, mixing with other reagents, and/or adjusting pH.

To maintain in situ geochemical conditions as much as possible, the batch tests were performed under a nitrogen atmosphere in an anaerobic chamber. The general procedure for the batch tests is described in the following steps:

1. Test bottles were prepared in a controlled atmosphere glove box with 200 milliliters (mL) of groundwater or slurries of 200 mL of groundwater and 20 grams of aquifer soil (dry weight basis) for a liquid-to-solid ratio of 10. The initial arsenic concentrations in all the Site groundwaters as received were lower than expected based on historical data. This was attributed to the partial oxidation of dissolved iron in the groundwaters (present at much higher concentrations than arsenic) and precipitation of iron oxides, which removed dissolved arsenic. The Site groundwater samples were spiked with arsenic to provide initial arsenic concentrations to enable evaluation of treatment performance for arsenic. An arsenic stock solution was prepared from sodium arsenate heptahydrate ($Na_2HAsO_4{\cdot}7H_2O$) and used to spike the Site groundwater used for the batch tests. Spiked dissolved arsenic concentrations were similar or higher than historical concentrations (100 or 400 milligrams per liter [µg/L]). Spiking of cobalt and lithium was not necessary because the initial cobalt and lithium concentrations were consistent with historical data.
2. Reagents or reagent mixtures were added to the test bottles at a predetermined dose based on groundwater chemistry and previous successful treatability studies at other sites. The reagent doses are presented in Table 8. Controls without any reagent were also prepared for each

groundwater and slurry. The test bottles were sealed in Mylar bags with oxygen-absorbent packets and placed on a shaker table for 7 days.

3. Supernatants were collected from the test bottles at the end of the reaction period, filtered using 0.45-micron polyethersulfone syringe filters, and preserved with nitric acid. The filtered water samples were submitted to ALS Environmental and analyzed for dissolved COIs by U.S. Environmental Protection Agency Method 200.8 (inductively coupled plasma mass spectrometry). Water quality parameters including pH, ORP, and specific conductivity (SC) were also measured at the time of collection.
4. The solid fractions from each test jar were recovered and archived for possible future characterization.

4.2 Screening Batch Test Results

Table 9 and Figures 2 through 7 show the results of the batch screening tests, specifically the following:

- Arsenic: All reagents and aeration generally reduced dissolved arsenic concentrations in groundwater to below the GWPS. Dissolved arsenic concentrations were also reduced to less than the GWPS (10 µg/L.) in all the groundwater and slurry control batch tests (except for GC-AP-MW-17) due to ongoing slow iron oxidation and precipitation, despite the steps taken to exclude oxygen from the batch tests.
- Cobalt: Cobalt is a COI in GC-AP-MW-1, GC-AP-MW-14, and GC-AP-MW-44H. $KMnO_4$ and $FeCl_3$ + $MnCl_2$ and $KMnO_4$ showed good cobalt removal performance overall (Figures 2, 5, and 7). The reagents $KMnO_4$ and $FeCl_3$ + $MnCl_2$ and $KMnO_4$ almost completely removed cobalt from GC-AP-MW-14 and GC-AP-MW-44H groundwaters. Aeration reduced cobalt to concentrations less than the GWPS in GC-MW-14.
- Lithium: None of the tested reagents in the screening batch tests were effective in reducing lithium concentrations in groundwaters and slurries that have lithium as a COI (Figures 3 through 6). Lithium concentrations in the GC-AP-MW-5 slurries were lower than those in the GC-AP-MW-5 groundwater, indicating a positive effect of the soil matrix in lithium removal. The soil used in the slurry test had high extractable iron and aluminum oxide contents. A major focus, therefore, of the subsequent optimization batch studies was to improve lithium removal by either increasing iron-based reagent doses or testing additional aluminum-based reagents.

Laboratory analytical reports are included in Appendix A.

4.3 Supplemental Screening Batch Tests

FerroBlack, dolomite fines, and dolomitic quicklime were obtained from vendors after the completion of the initial screening batch tests. Supplemental screening batch tests were subsequently performed with these reagents following the procedures for the initial batch screening tests. Results of the supplemental batch screening tests are shown in Tables 10 and 11 and Figures 8 through 16, and are summarized as follows:

- FerroBlack treatment of arsenic: Although arsenic concentrations in the controls were depleted after the test duration despite spiking dissolved arsenic concentrations to 750 µg/L, a few groundwater controls (i.e., GC-AP-MW-5, GC-AP-MW-10, and GC-AP-MW-17) still maintained 150 to 320 µg/L of dissolved arsenic. FerroBlack effectively reduced dissolved arsenic concentrations from the groundwaters to below or very close to the GWPS (8.0 to 11.4 µg/L; Figure 8). The GC-AP-MW-10 slurry control also maintained 61.1 µg/L of dissolved arsenic, and FerroBlack reduced dissolved arsenic concentration to 6.8 µg/L in the slurry (Figure 8). Therefore, FerroBlack was found to be an effective reagent to remove arsenic.
- FerroBlack treatment of cobalt: FerroBlack also exhibited excellent performance for cobalt removal (Figure 9). Dissolved cobalt concentrations in GC-AP-MW-1, GC-AP-MW-14, and GC-AP-MW-44H groundwaters and slurries decreased to <2 µg/L after mixing with FerroBlack. Cobalt was probably removed through adsorption and/or precipitation of cobalt sulfide. Note that FerroBlack increased the pH of the groundwaters and slurries from an average of 6.23 to an average of 8.99. The pH shifts are likely favorable for cobalt removal because of the following: 1) cobalt adsorption on iron oxides, oxidation products of FeS, is generally enhanced at higher pH, and 2) cobalt sulfide solubility is also substantially lower at higher pH.
- FerroBlack treatment of lithium: FerroBlack removed lithium to some extent but was generally not effective enough to reduce dissolved lithium concentrations below the GWPS of 40 µg/L, except for the GW-AP-MW-5 groundwater and slurry, in which initial lithium concentrations were relatively lower (70 to 100 µg/L) than other groundwaters and slurries (Figure 10).
- Dolomite fines and dolomitic quicklime: Overall, the two dolomite fines and dolomitic quicklime showed poor performance in removing the COIs from the Site groundwaters and slurries (Figures 11 through 16). Therefore, these reagents were not retained for further testing.

Laboratory analytical reports are included in Appendix A.

4.4 Optimization Batch Tests

In the screening batch tests, $KMnO_4$, $FeCl_3$ + $KMnO_4$ and $MnCl_2$, and FerroBlack effectively removed arsenic and cobalt from the Site groundwaters and slurries. Since none of the reagents achieved sufficient lithium removal performance at the tested doses (Table 8), achieving sufficient lithium removal became the primarily focus of the optimization batch tests. Optimization included increasing doses of selected reagents, adjusting solution pH, and testing new reagents that have a potential to remove lithium. Based on the screening batch test results and previous treatability studies performed by Anchor QEA for other coal combustion residuals sites, the following reagents were selected and tested to achieve better lithium removal:

- Hydrotalcite
- Reagent Mix A: $MgCl_2$ solution, followed by $NaAlO_2$ solution, plus sodium hydroxide (NaOH) for pH adjustment to 9.5
- Reagent Mix B: $MnCl_2$ + $FeCl_3$ solution, followed by $KMnO_4$ solution, plus NaOH for pH adjustment to 9.5
- Reagent Mix C: $MnCl_2$ + $FeCl_3$ + $MgCl_2$ solution, followed by $NaAlO_2$ + $KMnO_4$ solution, plus NaOH for pH adjustment to 9.5

These reagents were tested at two different (i.e., low and high) doses, and the doses of hydrotalcite and Reagent Mixes A, B, and C are summarized in Table 12. High doses were approximately two times higher than low doses.

Granular hydrotalcite, obtained from Kisuma Chemicals B.V., was crushed to accelerate the COI uptake kinetics for batch testing. A soluble reagent mix that can form hydrotalcite (Reagent Mix A) was also tested to assess the effectiveness in reducing lithium concentrations. $MnCl_2$ + $FeCl_3$ and $KMnO_4$ was tested again at higher doses with pH adjustment by NaOH to 9.5 (Reagent Mix B). Cobalt was effectively removed from the Site groundwaters and slurries by this reagent mix at neutral to basic pH in the screening batch test (Figures 5 and 7). Lithium was also expected to be removed better at higher pH (Ooi et al. 1988) because metal oxide surfaces are negatively charged at higher pH, which attracts positively charged ions such as lithium.

A combination of soluble reagents to simultaneously form hydrotalcite and iron/manganese mixed metal oxides (Reagent Mix C) was tested in the optimization batch tests. Reagent Mix C removed lithium in previous treatability studies and at other locations.

Results of the optimization batch tests are summarized in Figures 17 through 20, the data are provided in Table 13, and the laboratory analytical reports are included in Appendix A. Overall, the four tested reagents effectively reduced lithium concentrations in the Site groundwaters and slurries, although their performance slightly varied in different groundwaters and slurries. Reagent Mix C showed the best lithium removal performance. The lithium concentrations in GC-AP-MW-5 and GC-AP-MW-10 groundwaters and slurries after treatment with Reagent Mix C were below the GWPS of 40 µg/L. Reagent Mix C removed >80% and >90% of lithium at low and high doses, respectively, from GC-AP-MW-5 and GC-AP-MW-10 groundwaters and slurries, although the final lithium concentrations were slightly above the GWPS of 40 µg/L due to their high initial lithium concentrations (592 to 706 µg/L). Hydrotalcite and Reagent Mixes A and B also removed lithium, though to a lesser extent.

4.5 Summary and Selected Reagents for Column Tests

Table 14 summarizes the performance of all tested reagents to remove the COIs from the Site groundwater and groundwater-soil slurries. Based on superior performance as compared to the other treatments, FerroBlack and Reagent Mix C were selected for subsequent column studies. Additional evidence for FerroBlack and Reagent Mix C selection include the following:

- $FeSO_4$ and $FeCl_3$ are effective for arsenic only, not cobalt and lithium.
- CleanER-10 did not reduce cobalt and lithium concentrations, and arsenic removal was less certain due to the decreased arsenic concentrations in the controls.
- Barium chloride did not remove any COIs.
- Aeration may be a simple treatment option to treat arsenic when high dissolved iron concentrations are present, but aeration was found to be ineffective for cobalt and lithium removal.
- FerroBlack exhibited excellent performance for arsenic and cobalt removal and removed lithium to some extent.
- Dolomite fines and dolomitic quicklime did not remove the COIs effectively and may increase the COI concentrations in some cases.
- Hydrotalcite and Reagent Mix A removed lithium to some extent but did not decrease lithium to below the GWPS of 40 μg/L in most of the Site groundwaters and slurries.
- Reagent Mix C showed the best performance in removing lithium in the Site groundwaters and slurries in batch testing.

Considering the results of the batch tests, Reagent Mix C and FerroBlack were selected for column testing.

5 Column Tests

5.1 Methodology

Column tests were conducted to simulate injection applications of the selected reagents and to evaluate the COI removal performance of aquifer soils treated with the selected reagents under flow conditions. Column tests more closely simulate treatment under groundwater flow conditions than batch tests and provide information on removal effectiveness and capacity, as well as the stability of the reagents under conditions representative of a field treatment application. Column test results are also used to provide data to support pilot test design and confirm the selected reagents will not inadvertently increase concentrations of other Appendix III/IV constituents above the GWPS, for example, due to release from the aquifer matrix. The two reagents selected from the batch tests (Reagent Mix C and FerroBlack) were mixed with aquifer soils to produce treated soils. Impacted groundwater was then run through the treated soils in columns to assess removal effectiveness and capacity for treatment.

Specifically, column tests consisted of the following steps:

- Prepare reagents and mix with the aquifer soils to simulate results of injection in the field.
- Run six groundwater samples from different locations through each of the two treated soils (12 columns total; Figures 21 and 22).
- Sample column influent and effluent solutions periodically (three to five times weekly) and analyze for COIs and other salient water quality parameters such as pH, ORP, and SC.
  - Reduction of COIs in the column effluents will demonstrate the solids created by treatment are capturing COIs, optimally to the extent that column effluents are below GWPSs.
  - Increase in COIs in the column effluents will demonstrate release of COIs from the treated aquifer soils (unintended consequences).
- Following completion of the column tests using impacted groundwater, run background groundwater through the columns (COI-loaded aquifer soils) to determine the stability and remobilization potential of each COI.
- Following completion of the stability/remobilization column tests, perform SSE on COI-loaded aquifer soils to help determine mechanisms of sequestration and stability of the COIs.

Reagent Mix C precipitate was prepared by mixing the solution reagents (i.e., $MnCl_2$ + $FeCl_3$ + $MgCl_2$ solution and $NaAlO_2$ + $KMnO_4$ solution with pH adjustment by NaOH) and recovered by centrifugation. Reagent Mix C precipitate was mixed with the aquifer soils to produce Reagent Mix C precipitate-treated soils. FerroBlack, a dense, wet black iron sulfide precipitate, was directly mixed with the aquifer soils to produce treated soils. The treated soils were packed into 12.8-centimeter (cm)-long, 2.6-cm-diameter polypropylene columns to achieve a total depth (length) of 11 cm. The six groundwater samples were used as the column influents, and the two treated soil columns were prepared for the Site groundwaters. Therefore, a total of 12 column tests were performed. A summary of the column test setup is provided in Table 15.

The Site groundwaters containing the COIs were pumped in the upflow direction through the columns at a constant flow rate of approximately 0.3 mL per minute for up to 250 pore volumes (PVs) using a peristatic pump with a multichannel pump head. Flow rates were regularly checked and adjusted as needed to maintain a constant flow rate. Table 16 provides a summary of the column test operating conditions. The laboratory column apparatus is shown in Figure 21, and a detailed schematic is provided in Figure 22.

The initial arsenic concentrations in the Site groundwater samples collected for column testing were also lower than expected based on historical data (Table 2). The groundwater samples in the influent reservoirs were, therefore, spiked with arsenic at 1,000 µg/L. An arsenic stock solution was prepared from $Na_2HAsO_4 \cdot 7H_2O$ and added to the influent reservoirs of GC-AP-MW-1, GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-14, and GC-AP-MW-17 to produce influent concentrations of approximately 750 µg/L. Cobalt and lithium were not spiked because those COIs were not attenuated to the extent of arsenic by iron oxide precipitation in groundwater samples.

Column influent and effluent solutions were sampled periodically (three to five times weekly), and water quality parameters including pH, ORP, and SC were measured at the EGL. The cumulative flow volume was also recorded at the time of sampling and used to calculate the total number of PVs treated. Column influent and effluent samples were filtered using 0.45-micron polyethersulfone syringe filters and preserved with nitric acid. The samples were submitted to ALS Environmental for analysis of dissolved arsenic, cobalt, lithium, and treatment reagent constituents, including iron and manganese.

Results of bulk chemical composition data of Reagent Mix C precipitate and FerroBlack are presented in Table 17 and are included in Appendix A. Since other Appendix III/IV constituents in the aquifer soils were very low (Table 3), dissolved concentrations of those constituents in the effluents were not analyzed. Following the completion of this phase of the column test, the column influent was switched to background groundwater (GC-AP-MW-23) to assess the stability of the treatment. The column was run at a constant flow rate for approximately 10 to 30 PVs and column influents and effluents were sampled at intervals. Samples were analyzed for dissolved COIs and constituents of the treatment reagents used (e.g., iron, manganese, and sulfate). At the end of the column tests, column solids were recovered for SSE to further examine COI sequestration strength by the reagent-treated soils and to assess the stability of the treatment.

The laboratory column tests were operated at a higher linear velocity (81.4 cm per day) than the groundwater flow conditions in the vicinity of the Site, which ranges from 18.9 to 52.7 cm per day

(SCS 2022). As a result, the hydraulic residence time in the columns was shorter than the hydraulic residence time expected in the field, where longer residence times may be expected to result in greater extent of removal. The attenuation measured in the columns, therefore, provides a conservative estimate of the COI removal in the field.

After column studies were complete, Site background groundwater was run through the columns to determine the stability of each treatment. Effluent concentrations were less than effluent concentrations observed during treatment studies, indicating that treatment is expected to be stable, and Appendix III/IV constituents are not expected to be mobilized from treated aquifer soils by ambient groundwater flow after treatment.

Following completion of the column tests, the treated aquifer soils were tested to help evaluate the long-term stability of sequestered COIs using a five-step SSE procedure. In SSE, increasingly aggressive solutions formulated to identify specific binding mechanisms are run through the treated aquifer soils to help determine the mechanisms, strength of binding, and stability (or reversibility) of the COIs and their host solids.

5.2 Column Test Results

Column test results are included in Table 18 and Appendix A. Influent and effluent concentrations of the COIs for the six Site groundwaters are shown in Figures 23 through 28. The cumulative COI mass uptakes by the two treated soils in the columns are also plotted against the cumulative COI mass loadings in Figure 29 through 31.

Arsenic concentrations in the influent reservoirs were not stable and decreased over time, despite spiking of dissolved arsenic at 1,000 µg/L (Figures 23 through 27). Although the influent reservoirs were purged with nitrogen (N_2) and kept in sealed Mylar bags with oxygen-absorbing packets during the column tests, orange-brown iron oxide precipitates were observed to form inside the influent reservoirs over time, likely due to ongoing slow iron oxidation under anaerobic conditions. The dissolved arsenic concentrations in the GC-AP-MW-1 influent reservoir were lower than the GWPS throughout the column test (Figure 23). Dissolved arsenic concentrations in the GC-AP-MW-5 groundwater reservoir were higher than the GWPS during the first 40 PVs of column flow, but the two treated aquifer soil columns showed arsenic uptake (Figure 24). The other three Site groundwater reservoirs maintained dissolved arsenic concentrations higher than the GWPS for more than approximately 200 PVs, and both treated soils showed excellent arsenic uptake performance (Figures 25 through 27). Dissolved arsenic concentrations in the effluents from the two treated soil columns were lower than 1 µg/L for the duration of the column tests, up to approximately 250 PVs. The attenuation capacity of arsenic in the two treated soils from GC-AP-MW-10, GC-AP-MW-14, and GC-AP-MW-17 groundwaters was significant (Figure 29); excess attenuation capacity remained after 250 PVs.

Influent concentrations of dissolved cobalt remained relatively constant throughout the tests for all Site groundwaters (Figures 23, 26, and 28). Although both treated soils attenuated cobalt from GC-AP-MW-14 and GC-AP-MW-44H groundwater, the Reagent Mix C treated soil exhibited better cobalt removal performance than the FerroBlack treated soil (Figures 26 and 28). The Reagent Mix C treated soil attenuated dissolved cobalt in the two groundwaters below the GWPS of 16.7 µg/L throughout the column tests (more than approximately 250 PVs). The better cobalt attenuation capacity of Reagent Mix C treated soil for GC-AP-MW-14 and GC-AP-MW-44H were also evident from Figure 30. In contrast, the effluent dissolved cobalt concentrations from the FerroBlack treated soil columns typically exceeded the GWPS after 30 to 60 PVs (Figures 23 and 26). Cobalt in GC-AP-MW-1 was not effectively attenuated by the two treated aquifer soils (Figures 23 and 30). This is probably due to lower pH of GC-AP-MW-1 (Table 18). Influent pH in GC-AP-MW-1 was near 5.5 at the beginning and decreased to near 2.5 over time. The two treated aquifer soil columns neutralized pH up to approximately 100 PVs but had little effect at later times. Cobalt is generally attenuated by adsorption and precipitation at higher pH (Dzombak and Morel 1990; Fetter et al. 2018; Landry et al. 2009), but the two treated soil columns could not maintain pH higher than 6. Although FerroBlack increased pH and removed cobalt, even from GC-AP-MW-1 groundwater, in batch testing (Figure 8), FerroBlack did not increase pH under flow conditions. These results emphasize the importance of pH adjustment under flow conditions for cobalt removal.

Lithium was not attenuated to the extent of arsenic and cobalt by the two treated soils (Figures 24 through 27). Reagent Mix C treated soil attenuated dissolved lithium concentrations below the GWPS of 40 µg/L in GC-AP-MW-5 groundwater, which had the lowest dissolved lithium concentration (80 to 90 µg/L) among the Site groundwaters. However, dissolved lithium concentrations in other column effluents increased from 1 PV. Reagent Mix C treated soil exhibited better lithium attenuation capacity than FerroBlack treated soil for all groundwaters (Figure 31). Reagent Mix C precipitate may be an effective treatment to reduce dissolved lithium concentration below the GWPS for dissolved lithium concentrations similar to those at GW-AP-MW-5. As explained in the *Groundwater Remedy Selection Report* (Anchor QEA 2021a), source control, natural attenuation, and injection treatment are all expected to contribute to reduced lithium concentrations in groundwater.

Both Reagent Mix C and FerroBlack effectively removed arsenic from impacted groundwater during column studies, removing an average of >90% of the influent mass and achieving the GWPS in all studies. Reagent Mix C was more effective than FerroBlack at removing cobalt and lithium during column studies. In the two most successful column studies for cobalt using Reagent Mix C, 95% to 100% of the influent mass was removed, and concentrations were reduced to less than the GWPS for the duration of the studies. In the column studies for lithium using Reagent Mix C, 20% to 35% of the influent mass was removed, but the GWPS was only reached in half of the studies. Injection treatment is only one component of the remedy, as source control (slurry wall, consolidation, and capping) and natural attenuation are also expected to reduce concentrations of COIs in groundwater (Anchor QEA 2021a).

6 Mechanisms and Stability of Treatment

6.1 Column Tests to Assess Treatment Stability

Mechanisms and stability of treatment were assessed through additional column tests using background groundwater and SSE on post-column aquifer soils.

Following completion of the column tests using impacted groundwater, the column influents were switched to background groundwater (GC-AP-MW-23) to assess the reversibility of the COI removal by the treated soils. Background groundwater was run through the columns for up to approximately 30 PVs. During this phase of testing, the COI concentrations in the effluents were lower than the effluents from the previous treatment phase and decreased over time. These results demonstrate the irreversibility of COI treatment by the selected reagents. Column test results for this phase are included in Table 19 and Appendix A.

6.2 SSE on Post-Column Aquifer Soils

SSE quantifies the distribution of the sequestered COIs among different chemical phases in the treated and COI-loaded aquifer soils. SSE results provide insights into the COI removal mechanisms, potential for remobilization of COIs, and long-term stability of the sequestered COIs. Specifically, SSE categorizes the target constituents into five operationally defined fractions, F1 through F5, which require increasingly aggressive chemical reagents to extract. The chemical extractions and what they represent are as follows:

- F1: Soluble Fraction (1 molar (M) magnesium chloride adjusted to pH 7)
- F2: Exchangeable Fraction, e.g., on clay minerals (1 M monosodium phosphate at pH 5)
- F3: Reducible Fraction, e.g., poorly crystalline metal oxides such as iron and manganese oxides (0.1 M hydroxylamine/hydrochloric acid adjusted to pH 2 with nitric acid)
- F4: Strong Acid/Oxidizable Fraction, e.g., crystalline oxide and crystalline sulfide minerals (16 M nitric acid)
- F5: Residual Fraction, e.g., relict silicate phases from the aquifer matrix (digestion by U.S. Environmental Protection Agency Method 3050B)

SSE was performed in accordance with the EGL standard operating procedure. First, the bottom half of aquifer soil in the column was recovered and thoroughly homogenized under a nitrogen atmosphere in an anaerobic glove box. Approximately 1 gram (dry weight) of the recovered column media was weighed into a 50-mL centrifuge tube and extracted with the solutions described above.

The SSE results are summarized in Figures 32 through 34 and are included in Appendix A. SSE results indicate arsenic and cobalt are almost completely (near 100%) associated with the exchangeable, reducible, strong acid/oxidizable, and residual fractions. These fractions include COIs strongly adsorbed to and incorporated in poorly crystalline to crystalline iron and manganese oxides. The strong association with iron and manganese oxides were expected, and indicate successful treatment, as iron and manganese were major components of the treatment reagents. Lithium is also predominantly associated with the exchangeable and reducible fractions (which account for up to 80%) but with higher and variable amounts (10% to 40%) present in the soluble fraction.

7 Conclusions and Recommendations

Batch and column tests were performed to evaluate the effectiveness of reagents in removing the COIs (i.e., arsenic, cobalt, and lithium) from the Site groundwater. Performance criteria evaluated included the effectiveness of COI removal, whether the treatment had unintended consequences such as release of Appendix III/IV constituents from the aquifer matrix, and stability of the sequestered COIs after treatment. Major conclusions of the treatability studies are as follows:

- Reagent Mix C ($FeCl_3$ + $MnCl_2$ + $MgCl_2$, followed by $NaAlO_2$ + $KMnO_4$ solution + NaOH), a treatment that forms hydrotalcite and Fe and Mn oxides, performed the best for lithium-impacted groundwaters. Reagent Mix C also performed well for arsenic and cobalt treatment, so it can be used in areas where lithium or lithium plus arsenic and/or cobalt are COIs. The GWPS was achieved for all COIs during column tests, although lithium breakthrough occurred earlier than arsenic and cobalt. Depending on location, arsenic mass was removed 80% to 100%, cobalt mass was reduced 50% to 100%, and lithium mass was reduced 20% to 35%.
- Permanganate treatment generally performed well for arsenic and cobalt removal in batch tests.
- After column studies using impacted groundwater were complete, Site background groundwater was pumped through the columns to determine the reversibility of treatment. Effluent concentrations were less than effluent concentrations measured during the treatment phase, indicating treatment is not reversible, and Appendix III/IV constituents are not expected to be mobilized from aquifer soils by ambient groundwater flow after treatment.
- Following completion of the column tests, the column media (aquifer soils) were recovered to evaluate the long-term stability of sequestered COIs to remobilization using a five-step SSE procedure. SSE results indicate arsenic and cobalt are associated with and bound to iron and manganese oxides formed by the treatment. Lithium is also associated with poorly crystalline iron and manganese oxides, although a greater proportion is exchangeable and weakly bound to the solid phase.

Recommendations based on the laboratory treatability studies are as follows:

- Test Reagent Mix C in field pilot studies at the Site where lithium or lithium plus arsenic and/or cobalt are COIs in groundwater.
- Reagent Mix C requires mixing in situ in the aquifer, which has been performed successfully. However, to simplify field applications where lithium is not present (i.e., arsenic and/or cobalt are COIs), perform column tests for permanganate injection to evaluate effectiveness, possible COI release from the aquifer matrix, and stability.

Notes:
Samples were field filtered with a 0.45-micron filter at the time of collection and filtered again prior to analysis for dissolved constituents.
Samples taken on April 4, 2022, were sent directly to the analytical laboratories from the field.
Samples taken on April 14, 2022, were supplemental analyses performed on the groundwaters used in the initial screening, Ferroblack-Fe+ screening, and optimization batch tests.
Samples taken on August 31, 2022, were supplemental analyses performed on the groundwaters used in the dolimite screening batch test and column test.
Parentheses represent standard deviation for duplicate samples. GC-AP-MW-14 water quality measurements were not taken in duplicate.
--: not measured
µg/L: microgram per liter
µS/cm: microsiemen per centimeter
A: values are estimates for alkalinity when pH is >10 and/or total dissolved solids are greater than 500 mg/L
J: indicates the result is an estimated value
mg/L: milligram per liter
mV: millivolt
NTU: Nephelometric Turbidity Units
U: indicates the compound was analyzed for but not detected
pCi/L: picocurie per liter
SU: standard unit

Notes:

All results are reported on a dry weight basis.

1. Analytical results were reported on an as-received basis. Values were corrected to be on a dry-weight basis using moisture content values measured at the Anchor QEA, LLC, Environmental Geochemical Laboratory.

J: indicates the result was below the reporting limit and is an estimated value.

mg/kg: milligrams per kilogram

ft bgs: feet below ground surface

U: indicates the compound was analyzed for but not detected (Value is set to instrument detection limit.)

Table 4
Extractable Aluminum, Iron, and Manganese Oxides in Aquifer Soils

Sample ID	Boring Location	Depth Interval (ft bgs)	Extractable Oxides (mg/kg)			Simaltaneously Extractable Metals (mg/kg)		
			Aluminum[2]	Iron[2]	Manganese[3]	Arsenic[2]	Lithium[2]	Cobalt[2]
GC-AP-PT-1	PT-1	11.0–25.0	**52.3**	**223**	**4.50**	**0.322**	0.297 U	**0.512**

Notes:

Bold indicates detected values.

1. Duplicate

CEC: cation exchange capacity (Value is calculated by summing all exchangeable cations [mEq/kg])

ft bgs: feet below ground surface

J: Estimated value

mEq/kg: milliequivalent per kilogram

U: Value was analyzed for but not detected. Value is set to instrument detection limit.

Table 6
Moisture Content and Grain Size Distribution of Aquifer Soils

Sample ID	Depth Interval (ft bgs)	Moisture Content (%)	Gravel (%) (>2.00 mm)	Sand (%) (0.063–2.00 mm)	Silt (%) (0.005–0.063 mm)	Clay (%) (<0.005 mm)
GC-AP-PT-1	11.0–25.0	14.1	3.3	94.0	0.9	1.7
GC-AP-PT-1[1]	11.0–25.0	--	3.3	94.3	1.2	1.2
GC-AP-PT-2	34.0–40.0	17.8	0.4	90.8	6.1	2.7
GC-AP-PT-3	10.0–15.0	17.2	0.3	93.1	5.4	1.3
GC-AP-PT-4	24.0–35.0	15.6	1.8	93.9	3.1	1.2
GC-AP-PT-5	12.0–22.0	17.1	12.4	83.4	2.1	2.1

Notes:

Moisture content was measured in triplicate for each sample.

1. Duplicate

--: not applicable

ft bgs: feet below ground surface

mm: millimeter

Table 7
Pairs of Groundwater and Aquifer Soils Used in the Treatability Studies

Groundwater ID	Soil Sample ID	Depth Interval (ft bgs)	COI(s) in Groundwater
GC-AP-MW-1	GC-AP-PT-1	11.0–25.0	Arsenic and cobalt
GC-AP-MW-5	GC-AP-PT-5	12.0–22.0	Arsenic and lithium
GC-AP-MW-10	GC-AP-PT-4	24.0–35.0	Arsenic and lithium
GC-AP-MW-14	GC-AP-PT-3	10.0–15.0	Arsenic, cobalt, and lithium
GC-AP-MW-17	GC-AP-PT-2	34.0–40.0	Arsenic and lithium
GC-AP-MW-44H	GC-AP-PT-5	12.0–22.0	Cobalt

Notes:

COI: constituent of interest

ft bgs: feet below ground surface

Table 8
Reagent Doses in Screening Batch Tests

Reagent	Abbreviation	Dose	Notes
Ferrous sulfate	$FeSO_4$	1.33 mM $FeSO_4$	2 mL of 133 mM (0.133 M) stock solution was injected into 200 mL of groundwater.
Ferric chloride	$FeCl_3$	1.33 mM $FeCl_3$	2 mL of 133 mM (0.133 M) stock solution was spiked in 200 mL of groundwater.
CleanER-10	CER-10	1.33 mM as Fe	15.3 mg of CleanER-10 was added to achieve 1.33 mM of Fe.
FerroBlack	FB-Fe+	55 g/L	The dose was specified by the vendor (Redox Solutions).
Potassium permanganate	$KMnO_4$	1.33 mM $KMnO_4$	2 mL of 133 mM (0.133 M) stock solution was spiked in 200 mL of groundwater.
Ferrous sulfate and potassium permanganate	$FeSO_4$ + $KMnO_4$	1.00 mM $FeSO_4$, 0.33 mM $KMnO_4$	1.5 mL of 133 mM $FeSO_4$ stock solution and 0.5 mL of 133 mM $KMnO_4$ stock solution were injected into 200 mL of groundwater.
Ferric chloride, potassium permanganate, and manganese chloride	$FeCl_3$/$KMnO_4$ + $MnCl_2$	0.665 mM $FeCl_3$, 0.266 mM $KMnO_4$, 0.399 mM $MnCl_2$	1.0 mL of 133 mM $FeSO_4$ stock solution, 0.4 mL of 133 mM $KMnO_4$ stock solution, and 0.6 mL of 133 mM $MnCl_2$ solution were injected into 200 mL of groundwater.
Barium chloride	$BaCl_2$	1.33 mM $BaCl_2$	2 mL of 133 mM stock solution were spiked in 200 mL of groundwater.
Aeration	Aeration	--	No reagents; bottles were passively aerated during the batch test.
Dolomite (Helena Quarry)	Helena dolomite	50 g/L	10 g of fines (<75 μm) were added in 200 mL of groundwater.
Dolomite (Lakeshore Quarry)	Lakeshore dolomite	50 g/L	10 g of fines (<75 μm) were added in 200 mL of groundwater.
Dolomitic quicklime	Dolomitic quicklime	50 g/L	10 g of fines (<75 μm) were added in 200 mL of groundwater.

Notes:
--: not applicable
μm: micrometer
Fe: iron
g: gram
g/L: gram per liter
M: molar
mL: millililter
mM: millimolar
Mn: manganese

Table 9
Screening Batch Test Result Data

U: indicates the compound was analyzed for but not detected (value is set to instrument detection limit).

Table 12
Reagent Doses in Optimization Batch Tests

Reagent	Dose[1]		Notes
HT-4U	Low dose	50 g/L	Crushed with a mortar and pestle.
	High dose	100 g/L	
Reagent Mix A	Low dose	28.6 mM $MgCl_2$ and 9.52 mM $NaAlO_2$	1.2 M $MgCl_2$ solution and 0.4 M $NaAlO_2$ solution solution were prepared, and 5 and 10 mL of each solution was injected into 200 mL of groundwater for low and high doses, respectively. Then, pH was adjusted to 9.5±0.1 using sodium hydroxide.
	High dose	54.5 mM $MgCl_2$ and 18.2 mM $NaAlO_2$	
Reagent Mix B	Low dose	4.76 mM $FeCl_3$, 10.7 mM $MnCl_2$, 7.14 mM $KMnO_4$	(0.20 M $FeCl_3$ + 0.45 M $MnCl_2$) solution and 0.3 M $KMnO_4$ solution were prepared, and 5 and 10 mL of each solution was injected into 200 mL of groundwater for low and high doses, respectively. Then, pH was adjusted to 9.5±0.1 using sodium hydroxide.
	High dose	9.09 mM $FeCl_3$, 20.5 mM $MnCl_2$, and 13.6 mM $KMnO_4$	
Reagent Mix C	Low dose	4.76 mM $FeCl_3$, 10.7 mM $MnCl_2$, 28.6 mM $MgCl_2$, 7.14 mM $KMnO_4$, and 9.52 mM $NaAlO_2$	(1.2 M $MgCl_2$ + 0.20 M $FeCl_3$+ 0.45 M $MnCl_2$) solution and (0.30 M $KMnO_4$ + 0.4 M $NaAlO_2$) solution were prepared, and 5 and 10 mL of each solution was injected into 200 mL groundwater for low and high doses, respectively. Then, pH was adjusted to 9.5±0.1 using sodium hydroxide.
	High dose	9.09 mM $FeCl_3$, 20.5 mM $MnCl_2$, 54.5 mM $MgCl_2$, 13.6 mM $KMnO_4$ and 18.2 mM $NaAlO_2$	

Notes:

1. High dose is approximately two times higher than low dose.

g/L: gram per liter

M: molar

mL: milliliter

mM: millimolar

Reagent Mix A: $MgCl_2$ solution followed by $NaAlO_2$ solution [+NaOH for pH adjustment to 9.5]

Reagent Mix B: $MnCl_2$/$FeCl_3$ solution followed by $KMnO_4$ solution [+NaOH for pH adjustment to 9.5]

Reagent Mix C: $MnCl_2$/$FeCl_3$/$MgCl_2$ solution followed by $NaAlO_2$/$KMnO_4$ solution [+NaOH for pH adjustment to 9.5]

Notes:
Reaction time was 7 days.
Samples were processed under aerobic conditions, and arsenic was not analyzed, as the purpose of the optimization test was to optimize for lithium removal.
Groundwaters without lithium as a COI were not tested in this experiment.
--: not applicable
µg/L: microgram per liter
µS/cm: microsiemen per centimeter
COI: constituent of interest
Dup: duplicate
GWPS: groundwater protection standard
J: indicates the result is an estimated value
mV: millivolt
ORP: oxidation-reduction potential
Reagent Mix A: magnesium chloride, followed by sodium aluminate, pH-adjusted to 9.5±0.1 in sample bottle
Reagent Mix B: ferric chloride with manganese chloride followed by potassium permanganate, pH-adjusted to 9.5±0.1 in sample bottle
Reagent Mix C: ferric chloride with manganese chloride and magnesium chloride, followed by sodium aluminate with permanganate, pH-adjusted to 9.5±0.1 in sample bottle
SC: specific conductivity
U: indicates the compound was analyzed for but not detected

Notes:

Green cells indicate the concentration was decreasedd to less than the GWPS.

Yellow cells indicate the concentration was decreased by more than 50%, but the GWPS was not reached.

Orange cells indicate the concentration was decreased by less than 50%, and the GWPS was not reached.

Red cells indicate the concentration was increased more than 25% and the GWPS was not reached.

N/T: not tested

As: arsenic

Co: cobalt

Li: lithium

GWPS: groundwater protection standard

Reagent Mix A: $MgCl_2$ solution followed by $NaAlO_2$ solution (+NaOH for pH adjustment to 9.5)

Reagent Mix B: $MnCl_2/FeCl_3$ solution followed by $KMnO_4$ solution (+NaOH for pH adjustment to 9.5)

Reagent Mix C: $MnCl_2/FeCl_3/MgCl_2$ solution followed by $NaAlO_2/KMnO_4$ solution (+NaOH for pH adjustment to 9.5)

Table 15
Column Test Setup

Column No.	Reagent	Groundwater ID	Aquifer Soil ID (depth; feet)	COI	Soil Added (dry weight; grams)	Reagent Added (dry weight; grams)
1	Reagent Mix C	GC-AP-MW-1	GC-AP-PT-1 (11.0–25.0)	As and Co	67.2	2.33
2	FerroBlack-Fe+				93.7	2.75
3	Reagent Mix C	GC-AP-MW-5	GC-AP-PT-5 (12.0–22.0)	As and Li	66.0	2.29
4	FerroBlack-Fe+				91.4	2.67
5	Reagent Mix C	GC-AP-MW-10	GC-AP-PT-4 (24.0–35.0)	As and Li	71.0	2.46
6	FerroBlack-Fe+				94.2	2.77
7	Reagent Mix C	GC-AP-MW-14	GC-AP-PT-3 (10.0–15.0)	As, Co, and Li	66.2	2.29
8	FerroBlack-Fe+				93.8	2.75
9	Reagent Mix C	GC-AP-MW-17	GC-AP-PT-2 (34.0–40.0)	As and Li	62.3	2.16
10	FerroBlack-Fe+				89.2	2.62
11	Reagent Mix C	GC-AP-MW-44H	GC-AP-PT-5 (12.0–22.0)	Co	66.0	2.29
12	FerroBlack-Fe+				92.5	2.71

Notes:

Reagent Mix C: $MnCl_2/FeCl_3/MgCl_2$ solution followed by $NaAlO_2/KMnO_4$ solution (+NaOH for pH adjustment to 9.5)

As: arsenic

Co: cobalt

COI: contaminant of interest

Li: lithium

Table 16
Column Test Operating Conditions

Parameter	Value	Unit
Column depth	11.0	centimeter
Column inner diameter	2.6	centimeter
Flow rate	0.30	milliliter per minute
Porosity	43	%
Hydraulic residence time	1.41	hour
Superficial velocity	81.4	centimeter per day
Test duration	18	day
Pore volumes treated	Approximately 250	--

Note:

--: not applicable

Table 17
Appendix III/IV Parameters in Column Test Amendments

Component	Units	Reagent Mix C	Ferroblack-Fe+
Antimony, total	mg/kg	0.027 U	0.22
Arsenic, total	mg/kg	0.08 U	0.4 J
Barium, total	mg/kg	1.27	0.25
Beryllium, total	mg/kg	0.008 U	0.015 U
Boron, total	mg/kg	0.49 J	3
Cadmium, total	mg/kg	0.009 U	0.017 U
Calcium, total	mg/kg	10 J	112
Chromium, total	mg/kg	0.41	58.6
Cobalt, total	mg/kg	0.025 J	3.1
Fluoride	mg/kg	2.9 U	5.2 U
Lead, total	mg/kg	0.031 J	0.34
Lithium, total	mg/kg	0.49	0.24 U
Mercury, total	ng/g	0.34 J	0.48 U
Molybdenum, total	mg/kg	0.1	13
Selenium, total	mg/kg	0.1 U	0.2 U
Solids, total	%	67.4	37.7
Sulfate	mg/kg	7 U	107
Thallium, total	mg/kg	0.007 J	0.051

Notes:

All results are reported on a dry weight basis using the total solids determined by the analytical testing laboratory.

mg/kg: milligram per kilogram

ng/g: nanogram per gram

J: indicates the result is an estimated value

U: indicates the compound was analyzed for but not detected

Notes:

Amendment constituents were measured in influent samples on the first day of the experiment to establish baseline concentrations.

Reagent Mix C amendment constituents: iron, aluminum, manganese, and magnesium

FB-Fe+ amendment consituent: iron

1. Flow rate was measured in effluent samples only.

--: not applicable

µg/L: microgram per liter

µS/cm: microsiemen per centimeter

COI: constituent of interest

FB-Fe+: Ferroblack-Fe+

J: indicates the result is an estimated value

mg/L: milligram per liter

mL/min: milliliter per minute

mV: millivolt

ORP: oxidation reduction potential

Reagent Mix C: precipitates collected from reaction of ferric chloride, manganese chloride, and magnesium chloride with potassium permanganate and sodium aluminate at pH 9.5

SC: specific conductivity

U: indicates the compound was analyzed for but not detected (value is set to instrument detection limit).

Notes:

Desorption test was conducted after termination of column test by flowing GC-AP-MW-23 groundwater through all columns for 2 days.

1. Flow rate was measured in effluent samples only.

--: not applicable

µg/L: microgram per liter

µS/cm: microsiemen per centimeter

COI: constituent of interest

FB-Fe+: Ferroblack-Fe+

J: indicates the result is an estimated value

mL/min: milliliter per minute

mV: millivolt

NA: not analyzed; parameter not a COI for location

ORP: oxidation reduction potential

Reagent Mix C: precipitates collected from reaction of ferric chloride, manganese chloride, and magnesium chloride, with potassium permanganate and sodium aluminate at pH 9.5

SC: specific conductivity

U: indicates the compound was analyzed for but not detected (Value is set to instrument detection limit.)

RE: A2D0553 - Greene County - 201114-01.05 Task 09

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2D0553, which was received by the laboratory on 4/14/2022 at 1:06:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	0.9 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-16	Reanalysis of an original Batch QC sample.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

ANALYTICAL REPORT

Tuesday, May 10, 2022

Jessica Goin, PhD
Anchor QEA, LLC
6720 SW Macadam Ave. Suite 125
Portland, OR 97219

RE: A2D0837 - Greene County - 201114-01.05 Task 09

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2D0837, which was received by the laboratory on 4/15/2022 at 11:55:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	0.7 degC

DRAFT REPORT

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

Laboratory Results for: Greene County Treatability

Dear Accounts Payable,

Enclosed are the results of the sample(s) submitted to our laboratory September 02, 2022
For your reference, these analyses have been assigned our service request number **K2210132.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris

Client: Anchor QEA, LLC
Service Request: K2210132
Project: Greene County Treatability
Date Received: 09/02/2022
Sample Matrix: Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Eight water samples were received for analysis at ALS Environmental on 09/02/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 09/09/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Comments/Preservation

HNO3 preserved.
1 filtered bottle for dissolved metals, 1 unfiltered bottle for total metals.
3-Day TAT.
ICP-MS Method 200.8.

Notes: Please Contact Masa (503-972-5001, mkanematsu@anchorqea.com) if running > 10X dilution. Please analyze by ICP-MS method 200.8 to achieve the MDL < 1 ppb.

RIGHT SOLUTIONS | RIGHT PARTNER

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

KQ2215053-03

Analyte Name	Sample Result	Result	Spike Amount	% Rec	% Rec Limits
Arsenic	16.9	65.7	50.0	98	70-130
Cobalt	270	299	25.0	116 #	70-130
Iron	204000	204000	50	1557 #	70-130
Lithium	5.42	53.4	50.0	96	70-130
Manganese	15400	15500	25.0	353 #	70-130

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

RE: A2C0591 - Alabama Power-Greene County - 201114-01.05

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2C0591, which was received by the laboratory on 3/10/2022 at 2:26:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

GS-01	See detailed Particle Size Analysis results, accumulation curves, and Case Narratives at the end of this report.
J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-16	Reanalysis of an original Batch QC sample.

Analytical Resources, LLC

*****	Flagged value is not within established control limits.
D	The reported value is from a dilution
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- "	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
" *** "	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A2C1102 - Greene County - 201114-01.05 Task 09

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2C1102, which was received by the laboratory on 3/22/2022 at 1:41:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-01	Spike recovery and/or RPD is outside acceptance limits.
Q-02	Spike recovery is outside of established control limits due to matrix interference.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-16	Reanalysis of an original Batch QC sample.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
R-04	Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a ‘B-02’ qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a ‘B’ qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation
All reported analytes are included in Apex Laboratories' current ORELAP scope.					

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A2C1228 - Greene County - 201114-01.05 Task 09

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2C1228, which was received by the laboratory on 3/29/2022 at 12:55:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	2.6 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-16	Reanalysis of an original Batch QC sample.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- "	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
" *** "	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

ANALYTICAL REPORT

Monday, June 20, 2022

Jessica Goin, PhD
Anchor QEA, LLC
6720 SW Macadam Ave. Suite 125
Portland, OR 97219

RE: A2E0641 - Greene County - 201114-01.05 Task 09

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A2E0641, which was received by the laboratory on 5/16/2022 at 1:08:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: dthomas@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler#1	3.4 degC

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-02	Spike recovery is outside of established control limits due to matrix interference.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET	Analyte DETECTED at or above the detection or reporting limit.
ND	Analyte NOT DETECTED at or above the detection or reporting limit.
NR	Result Not Reported
RPD	Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry"	Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry") See Percent Solids section for details of dry weight analysis.
" wet"	Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.
" "	Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

‘B’ and ‘B-02’ qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

ORELAP Certification ID: OR100062 (Primary Accreditation) -
EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

Laboratory Results for: Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 10, 2022
For your reference, these analyses have been assigned our service request number **K2205023.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Client: Anchor QEA, LLC
Project: Green County Treatability
Sample Matrix: Water

Service Request: K2205023
Date Received: 05/10/2022

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/10/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 05/18/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.
Some samples may have residual purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 10, 2022
For your reference, these analyses have been assigned our service request number **K2205025.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Client: Anchor QEA, LLC
Project: Green County Treatability
Sample Matrix: Water

Service Request: K2205025
Date Received: 05/10/2022

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/10/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 05/18/2022

SAMPLE DETECTION SUMMARY

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.

Some samples may have purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

Cooler Receipt and Preservation Form

Client Anchor QEA Service Request K22 05025

Received: 5/10/22 Opened: 5/10/22 By: CG Unloaded: 5/10/22 By: CG

1. Samples were received via? USPS ~~Fed Ex~~ CG 5/10 UPS DHL PDX [✓ Courier] Hand Delivered
2. Samples were received in: (circle) [✓ Cooler] Box Envelope Other______ NA
3. Were custody seals on coolers? NA Y [✓ N] If yes, how many and where? ______
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID [✓ NA]	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number [✓ NA]	Filed
3.6		IR02				~~5325 5608 1135~~ CG 5/10	

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA [✓ Y] N
   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* [✓ *Baggies*] *Bubble Wrap* *Gel Packs* [✓ *Wet Ice*] *Dry Ice* *Sleeves* ______
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA [✓ Y] N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation

Laboratory Results for: Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 10, 2022
For your reference, these analyses have been assigned our service request number **K2205027.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Project:	Green County Treatability	**Date Received:**	05/10/2022
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/10/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 05/18/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.
Some samples may have purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

Cooler Receipt and Preservation Form

Client Anchor QEA Service Request K22 05027

Received: 5/10/22 Opened: 5/10/22 By: CG Unloaded: 5/10/22 By: CG

1. Samples were received via? *USPS* ~~*Fed Ex*~~ CG 5/10 *UPS* *DHL* *PDX* [✓ *Courier*] *Hand Delivered*
2. Samples were received in: (circle) [✓ *Cooler*] *Box* *Envelope* *Other*________ *NA*
3. Were custody seals on coolers? NA Y [✓ N] If yes, how many and where? ________

   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID/ [✓ NA]	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number [✓ NA]	Filed
3.6		IR02				~~5325 5608 1355~~ CG 5/10	

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:

   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA [✓ Y] N

   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* [✓ *Baggies*] *Bubble Wrap* *Gel Packs* [✓ *Wet Ice*] *Dry Ice* *Sleeves* ________
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA [✓ Y] N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: 2022-Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 11, 2022
For your reference, these analyses have been assigned our service request number **K2205114.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/11/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ____________________ Date 05/19/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.
Some samples may have purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: 2022-Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 11, 2022
For your reference, these analyses have been assigned our service request number **K2205115.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris

Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/11/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 05/19/2022

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.
Some samples may have residual purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

Cooler Receipt and Preservation Form

Client Anchor Service Request K2205115

Received: 5/11/22 Opened: 5/11/22 By: MM Unloaded: 5/11/22 By: MM

1. Samples were received via? USPS Fed Ex UPS DHL PDX [✓ Courier] Hand Delivered
2. Samples were received in: (circle) [✓ Cooler] Box Envelope Other ____ NA
3. Were custody seals on coolers? ~~NA~~ Y [✓ N] If yes, how many and where? ____

   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / [✓ NA]	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number / [✓ NA]	Filed
6.0		IR01		—			

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:

   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA [✓ Y] N

   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* [✓ *Baggies*] *Bubble Wrap* *Gel Packs* [✓ *Wet Ice*] *Dry Ice* *Sleeves* ____
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* [✓ NA] Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Did not ph due to limited volume

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: 2022-Green County Treatability

Dear Modi,

Enclosed are the results of the sample(s) submitted to our laboratory May 11, 2022
For your reference, these analyses have been assigned our service request number **K2205117.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/11/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 05/19/2022

Notes: If running > 10X Dilution please contact Masa (503-972-5001, mkanematsu@anchorqea.com), Please analyze by ICP-MS (Method 200.8) to achieve the MDL < 1 ppb.
Some samples may have purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted not to damage ICP-MS, please do so and let Masa know the dilution factor.

PM INIT

Cooler Receipt and Preservation Form

Client Anchor Service Request K22 05117

Received: 5/11/22 Opened: 5/11/22 By: MM Unloaded: 5/11/22 By: MM

1. Samples were received via? USPS Fed Ex UPS DHL PDX [✓ Courier] Hand Delivered
2. Samples were received in: (circle) [✓ Cooler] Box Envelope Other________ NA
3. Were custody seals on coolers? NA Y [✓ N] If yes, how many and where? ________

   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / [✓ NA]	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number / [✓ NA]	Filed
60		1201		—			

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:

   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA [✓ Y] N

   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: Frozen Partially Thawed Thawed

6. Packing material: Inserts [✓ Baggies] Bubble Wrap Gel Packs [✓ Wet Ice] Dry Ice Sleeves ________
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* [✓ NA] Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Did not Ph due to Limited Volume

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: Greene County Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory October 13, 2022
For your reference, these analyses have been assigned our service request number **K2212017.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Date Received: 10/13/2022
Sample Matrix: Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/13/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ____________________ Date 10/21/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Greene County Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory October 13, 2022
For your reference, these analyses have been assigned our service request number **K2212042.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Sample Matrix: Water

Service Request: K2212042
Date Received: 10/13/2022

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/13/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 10/20/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: Greene County Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory October 14, 2022
For your reference, these analyses have been assigned our service request number **K2212043.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Client:	Anchor QEA, LLC	**Service Request:**	K2212043
Project:	Greene County Treatability	**Date Received:**	10/14/2022
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/14/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 10/20/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Greene County Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory October 14, 2022
For your reference, these analyses have been assigned our service request number **K2212044.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris

RIGHT SOLUTIONS | RIGHT PARTNER

Client: Anchor QEA, LLC
Service Request: K2212044
Project: Greene County Treatability
Date Received: 10/14/2022
Sample Matrix: Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/14/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Cooler Receipt and Preservation Form

Client Anchor QEA Service Request K22 12044

Received: 10·13·22 Opened: 10·13·22 By: VM Unloaded: 10·13·22 By: VM

1. Samples were received via? *USPS* *Fed Ex* *UPS* *DHL* *PDX* [✓ *Courier*] *Hand Delivered*
2. Samples were received in: (circle) [✓ *Cooler*] *Box* *Envelope* *Other*______ *NA*
3. Were custody seals on coolers? NA Y N If yes, how many and where? ______

   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
3.6		IR02					
3.8							

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:

   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA [✓ Y] N

   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* [✓ *Baggies*] *Bubble Wrap* [✓ *Gel Packs*] *Wet Ice* *Dry Ice* *Sleeves* ______
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* [✓ NA] Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: COULD not PH Due to low Volume

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number

Laboratory Results for: Greene County Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory October 14, 2022
For your reference, these analyses have been assigned our service request number **K2212045.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Date Received: 10/14/2022
Sample Matrix: Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Ten water samples were received for analysis at ALS Environmental on 10/14/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 10/20/2022

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
